**L-Lecture**

**T-Tutorial**

**P-Practical**

### 3<sup>rd</sup> Semester

#### **BSCM 2201 MATHEMATICS - III (3-1-0)**

##### **Module - I (9 Lectures)**

Partial differential equations : The vibrating string. The wave equation & its solution.

The Heat equation and its solution

##### **Module - II (10 Lectures)**

Two - dimensional wave equation and its solution.

Laplace equation in polar, cylindrical and spherical coordinates. Potential.

##### **Module - III (13 Lectures)**

Complex analysis : Complex numbers and functions conformal mappings

Complex integration. Cauchy's Theorem Cauchy's integral formulas.

##### **Module - IV (8 Lectures)**

Taylor's and Laurent's series, Residue theorem, evaluation of real integrals.

The Course covered by : Advance Mathematics by E. Kreyszig, John Wiley & Son's (P) Ltd. (8th Edition)

Chapter 11 (except 11.6)

Chapter 12, 13, 14, 15

#### **CPES 5201 NETWORK THEORY (3-1-0)**

##### **MODULE - I (12 Hours)**

Topological description of networks; Reviews of mesh & nodal analysis. Reciprocity & Millman's theorem, Maximum power transfer theorem.

Q factor, Bandwidth and Selectivity in Series & parallel resonance Circuits.

Coupled Circuits : Dot Convention for representing coupled circuits, coefficient of coupling.

Loop Analysis of coupled circuits, single and double tuned coupled circuits Transient study in RLC networks by Laplace transform method with DC and AC excitation.

Response to step, impulse and ramp inputs S - domain circuits

Two Port networks : Z, Y, h, & ABCD representation of T and TT<sup>2</sup> - port networks both in transmission parameters T - TT networks, 2 port network, Cascade and Parallel Connections.

Image and iterative impedances.

##### **MODULE - II (12 Hours)**

Network Functions & Responses :

Concept of complex frequency, driving point and transfer functions for one port and two network, poles & zeros of network functions, Restriction on Pole and Zero locations of network function.

Impulse response and complete response. Time domain behaviour from pole-zero plot.

Filters : Design of low pass, high pass, band pass & band elimination filters. Active filters. Input Power, Power Transfer and Insertion loss.

Problems in Optimizing power transfer; Insertion loss.

### **MODULE - III (10 Hours)**

Fourier Series & Fourier Transforms : Fourier Series representation of non sinusoidal waves. Discrete spectra, rms values of non sinusoidal waves, Steady state response of linear circuits to non sinusoidal waves, power in such circuits. Fourier Integral and Fourier transform of signum and step functions. Applications to RL and RC circuits.

Network Synthesis :

Driving point functions, properties of positive real function.

### **MODULE - IV (8 Hours)**

Foster's reactance Theorem, Synthesis of LC, RC and RL networks by Cauer - I, Cauer - II, Foster - I, & II forms. Synthesis of active filters - Butterworth and Chebyshev Techniques.

### **TEXT BOOKS**

1. Network Analysis : M.E Van Valkenbrg
2. Network Analysis & Synthesis : Franklin F. Kua Second Edition

### **REFERENCE BOOKS**

1. A Course in Electrical Circuits and Analysis : M. L. Soni, J. C. Gupta
2. Network Synthesis : M. E. Van Valkenberg
3. Eoelectrical Networks : Alexander & Sadiku

## **BENG 1208 - FLUID MECHANICS AND HYDRAULIC MACHINE (3-1-0)**

### **Module – I**

(12 hours)

Introduction : Scope of fluid mechanics and its development as a science

Physical property of Fluid

Density, specific gravity, specific weight, specific volume, surface tension and capillarity, viscosity, compressibility and bulk modulus, Fluid classification.

### **Fluid static**

Pressure, Pascal's Law, Pressure variation for incompressible fluid, atmospheric pressure, absolute pressure, gauge pressure and vacuum pressure, manometer.

Hydrostatic process on submerged surface, force on a horizontal submerged plane surface, force on a vertical submerged plane surface.

### **Module – II**

(12 hours)

Buoyancy and flotation, Archimedes' principle, stability of immersed and floating bodies, determination of metacentric height.

Fluid kinematics : Introduction, description of fluid flow, classification of fluid flow. Acceleration of fluid particles, flow rate and continuity equation, differential equation of continuity.

Fluid dynamics : Introduction, Euler's equation along a streamline, energy equation, Bernoulli's equation, Analysis of finite control volumes and its application to siphon, venturimeter, orifice meter

### **Module – III**

(6 hours)

Turbine : Classification, reaction, Impulse, outward flow, inward flow and mixed flow turbines, Francis & Kaplan turbines, Pelton wheel, Physical description and principle of operation, Governing of Turbine.

## Module – IV

(8 hours)

Centrifugal Pump : Principles of classification, Blade angles, Velocity triangle, efficiency, specific speed, characteristics curve.

Reciprocating Pump : Principles of working, slip, work done, effect of acceleration and frictional resistance, separation

### Text Books

1. Fluid Mechanics, A.K. Mohanty, PHI
2. Introduction to Fluid Mechanics and Fluid Machines, S.K. Som and G. Biswas, TMH
3. Fluid Mechanics, Modi & Seth

## BSCP 2201 PHYSICS - II (3-0-0)

This one semester Physics course is divided into four units. The unit - I deals with some aspects of nuclear physics, unit - II introduces certain features of condensed matter physics, unit - III deals with certain aspects of semiconductors and superconductors and unit - IV introduces Opto-electronic devices and fibre-optic communication system.

### Unit - 1

This unit covers the basic principles and applications of different types of accelerators and their important applications.

**Detailed constructional features of accelerators are not necessary.**

1. Need for nuclear accelerators.
2. D.C. Accelerators : Cockcroft - Walton, Van de Graff, Tandem accelerators.
3. RF accelerators : Linear accelerator, cyclotron, electron accelerator, betatron.
4. Application of nuclear accelerators - production of radioisotopes, radiation processing of materials, medical applications.

### Unit - 2

This Unit deals with diffraction in crystals and its role in determining crystal structure.

Study of crystal structure by diffraction methods, Bragg's condition for crystal diffraction, Lau condition, Miller indices, Reciprocal lattice, Geometrical structure factor, Atomic form factor.

### Unit - 3

This unit deals with certain features of semiconductors and superconductors.

1. Energy bands in solids: Kronig - Penny model, allowed bands and forbidden gaps, elemental and compound semiconductors.
2. Superconductivity : Superconductors and their properties, Meisner effect, Type - I and Type - II Superconductors, Thermodynamic properties of superconductors, London equation, Application of superconductors.

### Unit - 4

This unit introduces some Opto - electronic devices and fibre - optic communication system.

Laser : Principle of lasing, properties of Laser, construction and working of semiconductor laser, Application of laser.

LED : Principle construction of operation and application, Introduction to fibre optics, basic characteristics of optical fibres, optical fibre communication system.

## **Books Recommended**

1. Nuclear Physics, P. R. Roy & B. P. Nigan
2. Particle Accelerators, M. S. Livingston & J. P. Blewett
3. Concepts of Modern Physics, A. Beiser
4. Introduction to Solid State Physics, C. Kittel
5. Introduction to Lasers, A. Avadhnlulu
6. Physics - II, B. B. Swain and P. K. Jena.

## **BSCP 2202 PHYSICS OF SEMICONDUCTOR DEVICES (3-0-0)**

### **Module I (10 Hours)**

An appreciation of Quantum Mechanics in determining electrical properties of semiconductor.

#### **The Semiconductor in Equilibrium :**

Equilibrium distribution of electrons & holes, the  $n_0$  and  $p_0$  equation, intrinsic carrier concentration; Dopant atoms and energy levels, ionization energy; the extrinsic semiconductor, the  $n_0 p_0$  product, position of Fermi-energy level, variation of  $E_F$  with doping concentration and temperature.

#### **Carrier Transport Phenomena :**

Carrier drift: mobility, conductivity, velocity saturation:

Carrier Diffusion: Diffusion current density. Total current density. The Einstein relation.

### **Module II (10 Hours)**

#### **Non-equilibrium Excess Carrier in Semiconductor**

Excess carrier generation and recombination, characteristics of excess carriers-continuity equation and time – dependent Diffusion equation. Ambipolar Transport – Derivation of equation and applications.

#### **The Pn junction and Diode**

Basic structure, built-in potential barrier, Electric field, space charge width; Reverse applied bias-space charge width and Electric field. Junction capacitances.

Pn junction Diode : Ideal – current voltage relationship, Minority Carrier distribution, Ideal Pn junction currents under forward and reverse bias.

### **Module III (10 Hours)**

#### **Pn junction diode (contd.):**

Temperature effects, Small signal model of Pn junction, Equivalent circuits Recombination Current. Junction Breakdown.

#### **Metal-Oxide- Semiconductor FET (MOSFET)**

The MOS structure : Energy band diagrams, Depletion Layer thickness, Work function difference, Flat band Voltage, Threshold Voltage, Charge distribution, Capacitance –Voltage characteristics.

The basic MOSFET operation, Current –Voltage relation (Concepts)

Frequency limitation : Small signal Equivalent circuit.

The CMOS Technology.

## **Module IV (10 Hours)**

### **The Bipolar Transistor**

Basic Principle of Operation., Simplified Transistor Current Relation. Modes of operation, Amplification with Bipolar transistors, Minority Carrier distribution Forward active mode, other modes of operation. Low Frequency Common Base Current gain,. Non-ideal effects –Base width Modulation, Breakdown Voltage. Equivalent Circuit Models –Eber's –Moll Model, Hybrid- Pi model. Frequency limitation. Large Signal Switching characteristics.

#### **Text Book :**

1. Semiconductor Physics and Devices- Basic Principles BY Donald A. Neamen, 3rd Edition, Tata McgrawHill Edition. (Selected portion from chapters 2,4,4,6,7,8,10 &11.)

#### **For additional reading**

2. Solid state Electronics Devices – y Ben G. Streetman and Sanjay Benerjee, 5th Edition, Pearson Edu.

## **BSCC 2201 CHEMISTRY - II (3-0-0)**

### **Module I (12 Lectures)**

(To develop awareness about Water Treatment)'

Water quality parameters and standards.

Hardness of Water : Types of hardness, Units of hardness, Determination of hardness. Disadvantages of hardwater, acidity and alkalinity, Water Softening Techniques. Boiler feed water, Water for Domestic purposes (municipal / Drinking Water)

### **Module II (10 Lectures)**

(To develop the basic concepts about the transition metal compounds and corrosion)

1. Corrosion:

Dry and wet corrosion, Galvanic Corrosion, Stress Corrothion, Factors affecting corrosion, Corrosion Control : (Proper design and fabrication procedure, Cathodic protection, Passivation).

(8 Lectures)

2. Polymers:

Nomenclature and classification, Thermoplastic and thermosetting resins, Some typical useful polymers:Polyethylene,PVC, polystyrene, PMMA, Nylon 6:6, Nylon 6, Bakelite, Terylene, Silicones. Natural and synthetic rubbers: Neoprene, Butyl and Polyuarethane rubber, Vulcanization.

(8 Lectures)

### **Module III (10 Lectures)**

(To introduce the students about the basic concepts of fuels)

1. Fuels:

Classification of fuels, calorific value, Analysis of Coal and Coke, Refining of Crude oil, Fractional distillation, Cracking, Knocking and antiknocking, Octane and Cetane number.

Gaseous Fuel : Prodcer gas, Water gas, LPG & CNG.

Cobustion Calculation.

#### **Module IV (10 Lectures)**

(To develop awareness amongst the students about the importance of water quality in domestic and industrial world and concepts of various kinds of pollutions)

1. Water Treatment:  
Water quality parameters and standards, treatment of water for industrial and domestic purpose.
2. Environment pollution:  
Green house effect, acid rain, depletion of ozone layer; Water pollution- bio chemical effect of lead, arsenic, mercury and fluorides, sewage-B.O.D. and C.O.D.

#### **Books:**

1. Organic Chemistry by Morrison and Boyd, 5th/6th Ed., Prentice Hall.
2. Organic Chemistry by Solomons and Fryhle, Wiley Publishing
3. Guide to Organic Reaction Mechanism by Peter Sykes
4. Concise Inorganic Chemistry by J. D. Lee, 4th/5th Ed. ELBS
5. Inorganic Chemistry by D. F. Shriver, P. W. Atkins, C. H. Langaford ,Oxford, 1990
6. A Text Book on Engineering Chemistry by B. Pani, Galgotia Publication.
7. Engineering Chemistry by P. C. Jain and M. Jain.
8. Engineering Chemistry by R. Gopalan, D. Venkapaya and S. Nagarajan, Vikas Publishing House.

### **BSCC 2202 MATERIAL SCIENCES (3-0-0)**

#### **MODULE - I (10 Lectures)**

1. Classification of Engineering Materials. Engineering properties of materials. Selection of Materials.
2. Electron theory of solids : Free electron theory of metals. Electrical conductivity; Thermal conductivity, Quantum theory of free electrons. Band theory of solids, Conductivity of metals
3. Conductors, Insulators, Semiconductors, Intrinsic and extrinsic semiconductors, Band theory of semi conductors Hall effect.
4. Super Conductors - Zero resistivity, Critical magnetic field and critical current density. Type I and II super conductors. Applications of Superconductors.

#### **MODULE - II (10 Lectures)**

5. Dielectric Materials : Microscopic Displacement of atoms and molecules in an external dc electric field, Polarization and dielectric constant, Dielectric susceptibility. Temperature dependence, Dielectric Breakdown. Ferro electric material Piezoelectrics, Pyroelectrics, Dielectric Materials as electrical isulators.
6. Magentic Properties of Materials : Dia, Para and Ferro magenetic materials. Theory of magnetism, Ferro magnetic materials or Ferrites, Comparison of magnetic behaviour and magnetic parameters of Dia, Para and Ferro magnetic materials.

7. Optical Properties of Materials : Scattering, Refraction, Theory of Refraction and absorption, Atomic Theory of optical properties. Lasers, Optical fibres - Principle, structure, application of optical fibre.

#### **MODULE - III (10 Lectures)**

8. Organic Materials : Polymers - Mechanism of Polymerization : Addition, condensation and copolymerisation, applications.  
Plastics - Types : Thermosetting and thermoplastics. Transfer moulding, injection moulding, extension moulding, Blow moulding, Welding of plastics; Rubber types, application.
9. Ceramics : Types, Structure, Mechanical properties, applications

#### **MODULE - IV (10 Lectures)**

10. Composite Materials : Agglomerated Materials : Cermets, Reinforced Materials : Reinforced Concrete. Glass fibre reinforced plastics, Carbon fibre reinforced plastics. Whiskers, fibre reinforced plastics, Laminated plastic sheets. Tufnol, Properties of composites. Metal matrix composites, manufacturing procedure for fibre reinforced composites.
11. Performance of Materials in Service : Service performance, failure, design considerations, Corrosion - types, (Atmospheric, Pitting, Stress Corrosion), Control & prevention, protective coating, Performance of metals and Ceramics at high temperature.

#### **Text Books :**

1. Callister W.D., Materials Science and Engineering, John Wiley & Sons.
2. Vijaya M. S., Rangarajan G, Materials Science, TMH
3. Rajendra V., Marikani A., Materials Science, TMH
4. Van Vlack L. H., Elements of Material Science and Engineering, Addison Wesley
5. Material Science, Raghavan
6. Processes and Material of manufacture : Lindberg, PHI.

### **BCSE 3201 OBJECT ORIENTED PROGRAMMING USING C++ (3-0-0)**

#### **Module I (10 Hours)**

Introduction to object oriented programming, user defined types, polymorphism, and encapsulation. Getting started with C++ -syntax, data-type, variables, strings, functions, exceptions and statements, namespaces and exceptions, operators. Flow control, functions, recursion. Arrays and pointers, structures.

#### **Module II (10 Hours)**

Abstraction mechanisms: Classes, private, public, constructors, member functions, static members, references etc. Class hierarchy, derived classes.

Inheritance: simple inheritance, polymorphism, object slicing, base initialization, virtual functions.

#### **Module III (12 Hours)**

Prototypes, linkages, operator overloading, ambiguity, friends, member operators, operator function, I/O operators etc.

Memory management: new, delete, object copying, copy constructors, assignment operator, this input/output.

Exception handling: Exceptions and derived classes, function exception declarations, Unexpected exceptions, Exceptions when handling exceptions, resource capture and release etc.

#### **Module IV (8 Hours)**

Templates and Standard Template library: template classes, declaration, template functions, namespaces, string, iterators, hashes, iostreams and other type.

Design using C++ design and development, design and programming, role of classes.

#### **Text Books:**

1. Bhave & Patekar- Object oriented Programming with C++, Pearson Education
2. Ashok N. Kamthane- Object oriented Programming with ANSI & Turbo C++, Pearson Education.
3. Robert Lafore- Object oriented programming in Microsoft C++.
4. Balguru Swamy-C++, TMH publication

### **HSSM 4201 ENGINEERING ECONOMICS AND COSTING(3-0-0)**

#### **Module I (10 Hours)**

Time value of money : Simple and compound interest, Time value equivalence, Compound interest factors, Cash flow diagrams, Calculation, Calculation of time –value equivalences.

Present worth comparisons, Comparisons of assets with equal, unequal and infinite lives, comparison of deferred investments, Future worth comparison, pay back period comparison.

#### **Module II (10 Hours)**

Use and situations for equivalent annual worth comparison, Comparison of assets of equal and unequal life. Rate of return, Internal rate of return, comparison of IRR with other methods, IRR misconceptions. Analysis of public Projects : Benefit/ Cost analysis, quantification of project, cost and benefits, benefit/ cost applications, Cost –effectiveness analysis.

#### **Module III (10 Hours)**

Depreciation, Computing depreciation charges, after tax economic comparison, Break-even analysis; linear and non-linear models. Sensitivity analysis: single and multiple parameter sensitivity.

#### **Module IV (12 Hours)**

Fixed and variable cost, Product and Process Costing, Standard Costing, Cost estimation, Relevant Cost for decision making, Cost estimation, Cost control and Cost reduction techniques.

#### **Text Book**

1. Horn green, C.T., Cost Accounting, Prentice Hall of India
2. Riggs, J.L ., Dedworth, Bedworth, D.B, Randhawa, S.U. Engineering Economics, McGraw Hill International Edition, 1996 (Chapter 2,3,4,5,7,8,9,11,12)

## **HSSM 4202 ORGANIZATIONAL BEHAVIOUR (3-0-0)**

### **Module I (8 Hours)**

The Study of Organizational Behaviour : Learning objectives, Definition and Meaning, Why Study OB, An OB Model, New Challenges for OB Manager.

Learning – Nature of Learning, How Learning occurs, Learning and OB.

Case Analysis

### **Module II (10 Hours)**

Foundations of Individual Behaviour : Personality – Meaning and Definition, Determinants of Personality, Personality Traits, Personality and OB.

Perception – Meaning and Definition, Perceptual Process, Importance of Perception in OB. Motivation – Nature and Importance, Herzberg's Two Factor Theory, Maslow's Need Hierarchy Theory, Alderfer's ERG Theory, Evaluations.

Case Analysis

### **Module III (12 Hours)**

Organizational Behaviour Process : Communication – Importance, Types, Gateways and Barriers to Communication, Communication as a tool for improving Interpersonal Effectiveness. Groups in Organizations - Nature, Types, Why do people join groups, Group Cohesiveness and Group Decision-making Managerial Implications, Effective Team Building. Leadership – Leadership & Management, Theories of Leadership – Trait theory, Leader Behaviour theory, Contingency Theory, Leadership and Followership, How to be an effective Leader. Conflict – Nature of Conflict and Conflict Resolution.

An Introduction to Transactional Analysis (TA).

Case Analysis

### **Module IV (10 Hours)**

Organization : Organizational Culture – Meaning and Definition, Culture and Organizational Effectiveness. Introduction to Human Resource Management – Selection, Orientation, Training and Development, Performance Appraisal, Incentives Organizational Change – Importance of Change, Planned Change and OB techniques. International Organizational Behaviour – Trends in International Business, Cultural Differences and Similarities, Individual and Interpersonal Behaviour in Global Perspective.

Case Analysis

### **TEXTBOOKS:**

Keith Davis, Organizational Behaviour, McGraw – Hill.

K.Aswhappa, Organizational Behaviour, Himalaya Publishing House.

### **REFERENCE BOOKS:**

Stephen P. Robbins, Organizational Behaviour, Prentice Hall of India.

Pradip N. Khandwalla, Organizational Behaviour, McGraw – Hill, New Delhi.

## CPES 5202 ANALOGUE ELECTRONICS CIRCUITS (3-1-0)

### MODULE - I (11 Hours)

1. DC biasing of BJTs and FETs : Load lines, Operating Point, Fixed bias and Voltage - divider bias. DC bias with voltage feedback. Bias stabilization. Design of bias.
2. Small Signal Modelling of BJT and Analysis : The  $r_e$  transistor model, hybrid model, graphical determination of h-parameters. Low frequency small signal analysis of CE, CC and CB configurations without feedback.

### MODULE - II (14 Hours)

3. Small Signal Modelling and Analysis of FETs : Small Signal Model, Analysis of JFET C-S and C-D configuration. Analysis of E-MOSFET and D-MOSFET configurations.
4. System Approach - Effects of  $R_s$  and  $R_L$  : Two-port system, Individual and combined effects of  $R_s$  and  $R_L$  on CE, Emitter follower and C-S networks.
5. BJT and JFET Frequency Response : General frequency considerations. Low-frequency analysis of R-C combination in single stage BJT or FET amplifier - Bode Plot. Lower Cut Off frequency for the system. Low frequency response of BJT and FET amplifiers. Miller Effect Capacitance. High - frequency modelling of BJT and FET. High frequency analysis of BJT and FET amplifiers - Bode plot. Square Wave testing of amplifiers.

### MODULE - III (14 Hours)

6. Compound Configurations : Cascade, Cascode and Darlington connections, C-MOS Circuit, Current Source Circuits, Differential amplifier circuit.
7. Feedback and Oscillator Circuit : Feedback and Oscillator Circuit : Feedback concept, Type of feedback circuits, Practical feedback circuit. Analysis of only voltage-series feedback type amplifier. Effects of negative feedback. Positive feedback, Barkhausen Criterion of Oscillation. Oscillator Operation. R-C phase shift oscillator. Crystal Oscillator.
8. Ideal Operational Amplifiers : Differential and Common mode operation, OP-AMP basics. Equivalent Circuit Analysis of Inverting and Non - inverting OP - AMP circuits. Input impedance.

### MODULE - IV (8 Hours)

9. Practical OP-AMPS : OP-AMP Specifications, DC offset parameters, frequency parameters, gain - bandwidth. OP-AMP applications on constant gain multiplier, Voltage summing, Integrator, Differentiator and Controlled sources. Instrumentation Amplifier and Active Filters - low, high and bandpass.
10. Power Amplifiers : Definition of A, B and C types. Conversion efficiency, Distortion analysis. Push - pull configuration.

### TEXT BOOK

1. Electronic Devices and Circuit Theory By - Robert L. Boylestad and Louis Nashelsky. 8th Edition Pearson Publication. Selected portion from Chapter 4, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15 and 17.

### SUPPLEMENTARY BOOKS

2. Electronic Design - By Martin S. Roden etl. Fourth Edition, SPD Publication.
3. Integrated Electronics - By Millman & Halkias, Mcgraw Hill International students Edition.
4. Electronic Devices and Circuits By David A. Bell, 4th Edition, PHI.

## **PRACTICALS**

### **BENG 9202 BASIC ELECTRONICS LABORATORY (0-0-3)**

(At least 8 experiments including 1 - 7 and any one from 8 - 10)

1. Familiarity with electronics components and Devices  
Testing of a semiconductor Diode and a Transistor. IC pins connection (Digital Multimeter should be used should be used in testing components and devices).
2. Study and use of Oscilloscope to view waveforms and measure its amplitude and frequency.
3. V - I Characteristic of a semiconductor diode. Determining DC and AC resistance.
4. Half wave and Full wave rectifiers without and with capacitor filter. Record of waveforms, Measurement of Average and rms values.
5. V - I Characteristics of anpn or pnp transistor. DC Biasing and measurement of dc voltages and currents.
6. Gain - frequency response of JFET common source R-C coupled amplifier/BJT CE RC coupled Amplifier.
7. Op amp in Inverting, non inverting, Integrating and Differentiating configuration, Record of wave forms.
8. Truth Tables of logic gates.
9. Study and experiment using MUX - DEMUX ICs / Shift Register IC.
10. Study on CMOS logic Inverter.

### **BENG 9201 BASIC ELECTRICAL ENGINEERING LABORATORY (0-0-3)**

#### **List of Experiment (Any 8 of the following)**

1. Study and measurement the armature and field resistance of a DC machine.
2. Calibration of ammeter, voltmeter and wattmeter with the help of sub-standard instrument.
3. Verification of circuit theorems. Thevenin's and Superposition theorems (with DC source only).
4. Voltage-current characteristics of incandescent lamps and fusing time-current characteristics of fuse wire.
5. Measurement of current, voltages and power in R-L-C series circuit excited by Single Phase AC supply.
6. Connection and starting of a three phase induction motor using direct online (DOL). or star-delta starter.
7. Connection and measurement of power consumption of a fluorescent lamp.
8. Determination of open circuit characteristics (OCC) of DC machine.
9. Starting and speed control of a DC shunt motor.
10. Connection and testing of a single phase energy meter (unity power factor load only)
11. Study of fan motor

**BCSE 9201 OOP WITH C++ LABORATORY (0-0-3)**  
**(10 classes for 10 different programs)**

1. Programs on concept of classes and objects.(1 class)
2. Programs using inheritance.(1 class)
3. Programs using polymorphism.(1 class)
4. Programs on use of operator overloading.(1 class)
5. Programs on use of memory management.(1 class)
6. Programs on exception handling and use of templates.( 1 class)
7. Programs on File handling in C++.(1 class)
8. Design problem on stock and accounting of a small organization, railway reservation, payroll preparation and optimization problem.(3 classes)

**BENG 9203 MECHANICAL ENGINEERING LABORATORY (0-0-3)**

**Group A (Mechanics / Material Testing Lab.**

1. Determination of equilibrium of coplanar forces.
2. Determination of Moment of Intertia of Flywheel
3. Determination of tensile strength of materials by Universal Testing Machine.

**Group B**

4. Determination of Metacentric Height and application to stability of floating bodies.
5. Verification of Bernoulli's Theorem and its application to Venturimeter.
6. Determination of Cd and Cd of Orifices.

**Group C**

7. Calibration of Bourden Type Pressure gauj and measurement pressure using manometers.
8. Study of Cut-Sections of 2 stroke and 4 stroke Diesel Engine.
9. Study of Cut-Sections of 2 stroke and 4 stroke Petrol Engine.

**CPES 9201 NETWORK DEVICES LABAROTARY (0-0-3)**

1. Verification of Network Theorems
2. Study of D.C. and A.C. transients RL, RC, and RLC circuits.
3. Determination of parameters of a 2 port network Z, Y, h and ABCD parameters.
4. Determination of frequency response, attenuation and phase characterstics of the following networks : Low Pass, High Pass, Band Pass and Band Elimination filters.
5. Study of a transformer as a coupled circuit and determination of its self and mutual inductance.
6. Response of single of double tuned coupled circuits.
7. Spectral analysis of a non - sinusoidal wave form.

**CPES 9202 ANALOG ELECTRONICS CIRCUIT LABORATORY (0-0-3)**

**List of Experiments**

(At least 10 out of 12 experiments should be done)

1. BJT Bias circuit –Design, construction & test
2. JEET Bias circuits – Design, construction and test.
3. Design, Build and test of BJT common-emitter circuit –D.C and A.C performance, A.C voltage gain, input impedance and output impedance with bypassed and unbypassed emitter resistor.
4. Design, Build and test of BJT emitter-follower-D.C and A.C performance voltage gain, input impedance and output impedance investigated.
5. Design, Build and Test of JFET common- source and common-drain amplifiers : D.C and A.C performance, Voltage gain, input impedance and output impedance investigated.
6. Frequency response of a common –emitter amplifier: low frequency, high frequency and mid frequency response.
7. feedback amplifiers : series and shunt feedback types- input and output impedance and A.C gain with and without feedback.
8. Differential amplifiers circuits: D.C bias and A.C operation without and with current source.
9. OP- Amp Schmitt Trigger Circuits.
10. OP-Amp Frequency Response and Compensation.
11. Square wave Testing of an amplifier.
12. R.C phase shift oscillator / Wien-Bridge Osc-using OP-Amp/ Crystal Osc.
13. Class A and Class B Power Amplifier.

## 4<sup>th</sup> Semester

### BSCM 2202 MATHEMATICS - IV (3-1-0)

#### Module - I

Solution of equations by iteration, Newton's method, Secant method, Interpolation  
Numerical integration and differentiation

#### Module - II

Gauss Siedel iteration method for solving a system of linear equations, Runge Kutta Methods,  
Introductory Linear Programming, Introductory Programming

#### Module - III

Probability, Random variables, Probability distribution, mean & variance of distribution  
Binomial, Poisson, hyper-geometric and normal distributions

#### Module - IV

Random sampling, estimation of parameters, confidence intervals, Testing of hypothesis, acceptance  
sampling, correlation and regression

Course covered by : Advance Mathematics by E. Kreyszig (8<sup>th</sup> Edition)

Chapter 17 (17.1 - 17.3, 17.5), Chapter 18 (18.4), Chapter 19 (19.1), Chapter 20, Chapter 21, Chapter  
22

### BENG 1208 - FLUID MECHANICS AND HYDRAULIC MACHINE (3-1-0)

#### Module – I

(12 hours)

Introduction : Scope of fluid mechanics and its development as a science  
Physical property of Fluid

Density, specific gravity, specific weight, specific volume, surface tension and capillarity, viscosity,  
compressibility and bulk modulus, Fluid classification.

#### Fluid static

Pressure, Pascal's Law, Pressure variation for incompressible fluid, atmospheric pressure, absolute  
pressure, gauge pressure and vacuum pressure, manometer.

Hydrostatic process on submerged surface, force on a horizontal submerged plane surface, force on  
a vertical submerged plane surface.

#### Module – II

(12 hours)

Buoyancy and flotation, Archimedes' principle, stability of immersed and floating bodies, determination  
of metacentric height.

Fluid kinematics : Introduction, description of fluid flow, classification of fluid flow. Acceleration of fluid  
particles, flow rate and continuity equation, differential equation of continuity.

Fluid dynamics : Introduction, Euler's equation along a streamline, energy equation, Bernoulli's  
equation, Analysis of finite control volumes and its application to siphon, venturi meter, orifice meter

#### Module – III

(6 hours)

Turbine : Classification, reaction, Impulse, outward flow, inward flow and mixed flow turbines, Francis  
& Kaplan turbines, Pelton wheel, Physical description and principle of operation, Governing of  
Turbine.

#### Module – IV

(8 hours)

Centrifugal Pump : Principles of classification, Blade angles, Velocity triangle, efficiency, specific  
speed, characteristics curve.

Reciprocating Pump : Principles of working, slip, work done, effect of acceleration and frictional  
resistance, separation

#### Text Books

1. Fluid Mechanics, A.K. Mohanty, PHI

2. Introduction to Fluid Mechanics and Fluid Machines, S.K. Som and G. Biswas, TMH
3. Fluid Mechanics, Modi & Seth

### **CPES 5201 NETWORK THEORY (3-1-0)**

#### **MODULE - I (12 Hours)**

Topological description of networks; Reviews of mesh & nodal analysis. Reciprocity & Millman's theorem, Maximum power transfer theorem.

Q factor, Bandwidth and Selectivity in Series & parallel resonance Circuits.

Coupled Circuits : Dot Convention for representing coupled circuits, coefficient of coupling.

Loop Analysis of coupled circuits, single and double tuned coupled circuits Transient study in RLC networks by Laplace transform method with DC and AC excitation.

Response to step, impulse and ramp inputs S - domain circuits

Two Port networks : Z, Y, h, & ABCD representation of T and TT2 - port networks both in transmission parameters T - TT networks, 2 port network, Cascade and Parallel Connections.

Image and iterative impedances.

#### **MODULE - II (12 Hours)**

Network Functions & Responses :

Concept of complex frequency, driving point and transfer functions for one port and two network, poles & zeros of network functions, Restriction on Pole and Zero locations of network function. Impulse response and complete response. Time domain behaviour from pole-zero plot.

Filters : Design of low pass, high pass, band pass & band elimination filters. Active filters. Input Power, Power Transfer and Insertion loss.

Problems in Optimizing power transfer; Insertion loss.

#### **MODULE - III (10 Hours)**

Fourier Series & Fourier Transforms : Fourier Series representation of non sinusoidal waves. Discrete spectra, rms values of non sinusoidal waves, Steady state response of linear circuits to non sinusoidal waves, power in such circuits. Fourier Integral and Fourier transform of signum and step functions. Applications to RL and RC circuits.

Network Synthesis :

Driving point functions, properties of positive real function.

#### **MODULE - IV (8 Hours)**

Foster's reactance Theorem, Synthesis of LC, RC and RL networks by Cauer - I, Cauer - II, Foster - I, & II forms. Synthesis of active filters - Butterworth and Chebyshev Techniques.

#### **TEXT BOOKS**

1. Network Analysis : M.E Van Valkenbrg
2. Network Analysis & Synthesis : Franklin F. Kua Second Edition

## REFERENCE BOOKS

1. A Course in Electrical Circuits and Analysis : M. L. Soni, J. C. Gupta
2. Network Synthesis : M. E. Van Valkenberg
3. Eloeetrical Networks : Alexander & Sadiku

## BSCC 2201 CHEMISTRY - II (3-0-0)

### Module I (12 Lectures)

(To develop awareness about Water Treatment)

Water quality parameters and standards.

Hardness of Water : Types of hardness, Units of hardness, Determination of hardness. Disadvantages of hardwater, acidity and alkalinity, Water Softening Techniques. Boiler feed water, Water for Domestic purposes (municipal / Drinking Water)

### Module II (10 Lectures)

(To develop the basic concepts about the transition metal compounds and corrosion)

1. Corrosion:

Dry and wet corrosion, Galvanic Corrosion, Stress Corrothion, Factors affecting corrosion, Corrosion Control : (Proper design and fabrication procedure, Cathodic protection, Passivation).

(8 Lectures)

2. Polymers:

Nomenclature and classification, Thermoplastic and thermosetting resins, Some typical useful polymers: Polyethylene, PVC, polystyrene, PMMA, Nylon 6:6, Nylon 6, Bakelite, Terylene, Silicones. Natural and synthetic rubbers: Neoprene, Butyl and Polyurethane rubber, Vulcanization.

(8 Lectures)

### Module III (10 Lectures)

(To introduce the students about the basic concepts of fuels)

1. Fuels:

Classification of fuels, calorific value, Analysis of Coal and Coke, Refining of Crude oil, Fractional distillation, Cracking, Knocking and antiknocking, Octane and Cetane number.

Gaseous Fuel : Prodcer gas, Water gas, LPG & CNG.

Cobustion Calculation.

### Module IV (10 Lectures)

(To develop awareness amongst the students about the importance of water quality in domestic and industrial world and concepts of various kinds of pollutions)

1. Water Treatment:

Water quality parameters and standards, treatment of water for industrial and domestic purpose.

2. Environment pollution:  
Green house effect, acid rain, depletion of ozone layer; Water pollution- bio chemical effect of lead, arsenic, mercury and fluorides, sewage-B.O.D. and C.O.D.

**Books:**

1. Organic Chemistry by Morrison and Boyd, 5th/6th Ed., Prentice Hall.
2. Organic Chemistry by Solomons and Fryhle, Wiley Publishing
3. Guide to Organic Reaction Mechanism by Peter Sykes
4. Concise Inorganic Chemistry by J. D. Lee, 4th/5th Ed. ELBS
5. Inorganic Chemistry by D. F. Shriver, P. W. Atkins, C. H. Langford, Oxford, 1990
6. A Text Book on Engineering Chemistry by B. Pani, Galgotia Publication.
7. Engineering Chemistry by P. C. Jain and M. Jain.
8. Engineering Chemistry by R. Gopalan, D. Venkayya and S. Nagarajan, Vikas Publishing House.

## **BSCC 2202 MATERIAL SCIENCES (3-0-0)**

### **MODULE - I (10 Lectures)**

1. Classification of Engineering Materials. Engineering properties of materials. Selection of Materials.
2. Electron theory of solids : Free electron theory of metals. Electrical conductivity; Thermal conductivity, Quantum theory of free electrons. Band theory of solids, Conductivity of metals
3. Conductors, Insulators, Semiconductors, Intrinsic and extrinsic semiconductors, Band theory of semi conductors Hall effect.
4. Super Conductors - Zero resistivity, Critical magnetic field and critical current density. Type I and II super conductors. Applications of Superconductors.

### **MODULE - II (10 Lectures)**

5. Dielectric Materials : Microscopic Displacement of atoms and molecules in an external dc electric field, Polarization and dielectric constant, Dielectric susceptibility. Temperature dependence, Dielectric Breakdown. Ferro electric material Piezoelectrics, Pyroelectrics, Dielectric Materials as electrical insulators.
6. Magnetic Properties of Materials : Dia, Para and Ferro magnetic materials. Theory of magnetism, Ferro magnetic materials or Ferrites, Comparison of magnetic behaviour and magnetic parameters of Dia, Para and Ferro magnetic materials.
7. Optical Properties of Materials : Scattering, Refraction, Theory of Refraction and absorption, Atomic Theory of optical properties. Lasers, Optical fibres - Principle, structure, application of optical fibre.

### **MODULE - III (10 Lectures)**

8. Organic Materials : Polymers - Mechanism of Polymerization : Addition, condensation and copolymerisation, applications.  
Plastics - Types : Thermosetting and thermoplastics. Transfer moulding, injection moulding, extension moulding, Blow moulding, Welding of plastics; Rubber types, application.

9. Ceramics : Types, Structure, Mechanical properties, applications

#### **MODULE - IV (10 Lectures)**

10. Composite Materials : Agglomerated Materials : Cermets, Reinforced Materials : Reinforced Concrete. Glass fibre reinforced plastics, Carbon fibre reinforced plastics. Whiskers, fibre reinforced plastics, Laminated plastic sheets. Tufnol, Properties of composites. Metal matrix composites, manufacturing procedure for fibre reinforced composites.
11. Performance of Materials in Service : Service performance, failure, design considerations, Corrosion - types, (Atmospheric, Pitting, Stress Corrosion), Control & prevention, protective coating, Performance of metals and Ceramics at high temperature.

#### **Text Books :**

1. Callister W.D., Materials Science and Engineering, John Wiley & Sons.
2. Vijaya M. S., Rangarajan G, Materials Science, TMH
3. Rajendra V., Marikani A., Materials Science, TMH
4. Van Vlack L. H., Elements of Material Science and Engineering, Addison Wesley
5. Material Science, Raghavan
6. Processes and Material of manufacture : Lindberg, PHI.

### **BSCP 2201 PHYSICS - II (3-0-0)**

This one semester Physics course is divided into four units. The unit - I deals with some aspects of nuclear physics, unit - II introduces certain features of condensed matter physics, unit - III deals with certain aspects of semiconductors and superconductors and unit - IV introduces Opto-electronic devices and fibre-optic communication system.

#### **Unit - 1**

This unit covers the basic principles and applications of different types of accelerators and their important applications.

#### **Detailed constructional features of accelerators are not necessary.**

1. Need for nuclear accelerators.
2. D.C. Accelerators : Cockcroft - Walton, Van de Graff, Tandem accelerators.
3. RF accelerators : Linear accelerator, cyclotron, electron accelerator, betatron.
4. Application of nuclear accelerators - production of radioisotopes, radiation processing of materials, medical applications.

#### **Unit - 2**

This Unit deals with diffraction in crystals and its role in determining crystal structure.

Study of crystal structure by diffraction methods, Bragg's condition for crystal diffraction, Lau condition, Miller indices, Reciprocal lattice, Geometrical structure factor, Atomic form factor.

#### **Unit - 3**

This unit deals with certain features of semiconductors and superconductors.

1. Energy bands in solids: Kronig - Penny model, allowed bands and forbidden gaps, elemental and compound semiconductors.

2. Superconductivity : Superconductors and their properties, Meisner effect, Type - I and Type - II Superconductors, Thermodynamic properties of superconductors, London equation, Application of superconductors.

#### **Unit - 4**

This unit introduces some Opto - electronic devices and fibre - optic communication system.

Laser : Principle of lasing, properties of Laser, construction and working of semiconductor laser, Application of laser.

LED : Principle construction of operation and application, Introduction to fibre optics, basic characteristics of optical fibres, optical fibre communication system.

#### **Books Recommended**

1. Nuclear Physics, P. R. Roy & B. P. Nigan
2. Particle Accelerators, M. S. Livingston & J. P. Blewett
3. Concepts of Modern Physics, A. Beiser
4. Introduction to Solid State Physics, C. Kittel
5. Introduction to Lasers, A. Avadhnlulu
6. Physics - II, B. B. Swain and P. K. Jena.

### **BSCP 2202 PHYSICS OF SEMICONDUCTOR DEVICES (3-0-0)**

#### **Module I (9 Hours)**

An appreciation of Quantum Mechanics in determining electrical properties of semiconductor.

#### **The Semiconductor in Equilibrium :**

Equilibrium distribution of electrons & holes, the  $n_0$  and  $p_0$  equation, intrinsic carrier concentration; Dopant atoms and energy levels, ionization energy; the extrinsic semiconductor, the  $n_0 p_0$  product, position of Fermi-energy level, variation of  $E_F$  with doping concentration and temperature.

#### **Carrier Transport Phenomena :**

Carrier drift: mobility, conductivity, velocity saturation:

Carrier Diffusion: Diffusion current density. Total current density. The Einstein relation.

#### **Module II (9 Hours)**

#### **Non-equilibrium Excess Carrier in Semiconductor**

Excess carrier generation and recombination, characteristics of excess carriers-continuity equation and time – dependent Diffusion equation. Ambipolar Transport – Derivation of equation and applications.

#### **The Pn junction and Diode**

Basic structure, built-in potential barrier, Electric field, space charge width; Reverse applied bias-space charge width and Electric field. Junction capacitances.

Pn junction Diode : Ideal – current voltage relationship, Minority Carrier distribution, Ideal Pn junction currents under forward and reverse bias.

### **Module III (9 Hours)**

#### **Pn junction diode (contd.):**

Temperature effects, Small signal model of Pn junction, Equivalent circuits Recombination Current. Junction Breakdown.

#### **Metal-Oxide- Semiconductor FET (MOSFET)**

The MOS structure : Energy band diagrams, Depletion Layer thickness, Work function difference, Flat band Voltage, Threshold Voltage, Charge distribution, Capacitance –Voltage characteristics.

The basic MOSFET operation, Current –Voltage relation (Concepts)

Frequency limitation : Small signal Equivalent circuit.

The CMOS Technology.

### **Module IV (8 Hours)**

#### **The Bipolar Transistor**

Basic Principle of Operation., Simplified Transistor Current Relation. Modes of operation, Amplification with Bipolar transistors, Minority Carrier distribution Forward active mode, other modes of operation. Low Frequency Common Base Current gain,. Non-ideal effects –Base width Modulation, Breakdown Voltage. Equivalent Circuit Models –Eber's –Moll Model, Hybrid- Pi model. Frequency limitation. Large Signal Switching characteristics.

#### **Text Book :**

1. Semiconductor Physics and Devices- Basic Principles BY Donald A. Neamen, 3rd Edition, Tata McgrawHill Edition. (Selected portion from chapters 2,4,4,6,7,8,10 &11.)

#### **For additional reading**

2. Solid state Electronics Devices – y Ben G. Streetman and Sanjay Benerjee, 5th Edition, Pearson Edu.

## **BCSE 3202 RELATIONAL DATABASE MANAGEMENT SYSTEMS (3-0-0)**

### **Module I (10 Hours)**

Database System Architecture - Data Abstraction, Data Independence, Data Definitions and Data Manipulation Languages.

Data models - Entity Relationship(ER), Mapping ER Model to Relational Model, Network .Relational and Object Oriented Data Models, Integrity Constraints and Data Manipulation Operations.

### **Module II (10 Hours)**

Relation Query Languages, Relational Algebra, Tuple and Domain Relational Calculus, SQL and QBE.

Relational Database Design: Domain and Data dependency, Armstrong's Axioms, Normal Forms, Dependency Preservation, Lossless design, Comparison of Oracle & DB2

### **Module III (8 Hours)**

Query Processing and Optimization: Evaluation of Relational Algebra Expressions, Query Equivalence, Join strategies, Query Optimization Algorithms.

#### **Module IV (12 Hours)**

Storage Strategies: Indices, B-Trees, Hashing, Transaction processing: Recovery and Concurrency Control, Locking and Timestamp based Schedulers, Multiversion and Optimistic Concurrency Control Schemes.

Advanced topics: Object-Oriented and Object Relational databases. Logical Databases, Web Databases, Distributed Databases, Data Warehouse and Data Mining.

#### **Text Books:-**

1. Elmaski & Navathe -Fundamentals of Database Systems, 4<sup>th</sup> Edition, Pearson Education
2. C.J.Date - An introduction to Database Systems, Pearson Education
3. Bipin Desai -An introduction to Database System, Galgotia Publication.

### **HSSM 4202 ORGANIZATIONAL BEHAVIOUR (3-0-0)**

#### **Module I (8 Hours)**

The Study of Organizational Behaviour : Learning objectives, Definition and Meaning, Why Study OB, An OB Model, New Challenges for OB Manager.

Learning – Nature of Learning, How Learning occurs, Learning and OB.

Case Analysis

#### **Module II (10 Hours)**

Foundations of Individual Behaviour : Personality – Meaning and Definition, Determinants of Personality, Personality Traits, Personality and OB.

Perception – Meaning and Definition, Perceptual Process, Importance of Perception in OB. Motivation – Nature and Importance, Herzberg's Two Factor Theory, Maslow's Need Hierarchy Theory, Alderfer's ERG Theory, Evaluations.

Case Analysis

#### **Module III (12 Hours)**

Organizational Behaviour Process : Communication – Importance, Types, Gateways and Barriers to Communication, Communication as a tool for improving Interpersonal Effectiveness. Groups in Organizations - Nature, Types, Why do people join groups, Group Cohesiveness and Group Decision-making Managerial Implications, Effective Team Building. Leadership – Leadership & Management, Theories of Leadership – Trait theory, Leader Behaviour theory, Contingency Theory, Leadership and Followership, How to be an effective Leader. Conflict – Nature of Conflict and Conflict Resolution.

An Introduction to Transactional Analysis (TA).

Case Analysis

#### **Module IV (10 Hours)**

Organization : Organizational Culture – Meaning and Definition, Culture and Organizational Effectiveness. Introduction to Human Resource Management – Selection, Orientation, Training and Development, Performance Appraisal, Incentives Organizational Change – Importance of Change, Planned Change and OB techniques. International Organizational Behaviour – Trends in International Business, Cultural Differences and Similarities, Individual and Interpersonal Behaviour in Global Perspective.

Case Analysis

**TEXTBOOKS:**

Keith Davis, Organizational Behaviour, McGraw – Hill.

K.Aswhathappa, Organizational Behaviour, Himalaya Publishing House.

**REFERENCE BOOKS:**

Stephen P. Robbins, Organizational Behaviour, Prentice Hall of India.

Pradip N. Khandwalla, Organizational Behaviour, McGraw – Hill, New Delhi.

**HSSM 4201 ENGINEERING ECONOMICS AND COSTING(3-0-0)****Module I (10 Hours)**

Time value of money : Simple and compound interest, Time value equivalence, Compound interest factors, Cash flow diagrams, Calculation, Calculation of time –value equivalences.

Present worth comparisons, Comparisons of assets with equal, unequal and infinite lives, comparison of deferred investments, Future worth comparison, pay back period comparison.

**Module II (10 Hours)**

Use and situations for equivalent annual worth comparison, Comparison of assets of equal and unequal life. Rate of return, Internal rate of return, comparison of IRR with other methods, IRR misconceptions. Analysis of public Projects : Benefit/ Cost analysis, quantification of project, cost and benefits, benefit/ cost applications, Cost –effectiveness analysis.

**Module III (10 Hours)**

Depreciation, Computing depreciation charges, after tax economic comparison, Break-even analysis; linear and non-linear models. Sensitivity analysis: single and multiple parameter sensitivity.

**Module IV (12 Hours)**

Fixed and variable cost, Product and Process Costing, Standard Costing, Cost estimation, Relevant Cost for decision making, Cost estimation, Cost control and Cost reduction techniques.

**Text Book**

1. Horn green, C.T., Cost Accounting, Prentice Hall of India
2. Riggs, J.L ., Dedworth, Bedworth, D.B, Randhawa, S.U. Engineering Economics, McGraw Hill International Edition, 1996 (Chapter 2,3,4,5,7,8,9,11,12)

**CPES 5203 DIGITAL ELECTRONICS CIRCUITS (3-1-0)****Module I (11 Hours)****Number System and Codes**

Binary Number base Conversations, Octal and Hexadecimal numbers, Complements, Signed Binary Numbers, Binary Codes- BCD Codes, Gray Code, ASCII Character Code, Codes for serial data transmission and storage.

**Boolean Algebra and Logic Gates**

Axiomatic definition of Boolean algebra. Basic theorems and properties of Boolean algebra, Boolean functions; Canonical and Standard forms; minterms and maxterms standard forms; minterms and maxterms, standard forms Digital Logic Gates, multiple inputs.

## **Module II (13 Hours)**

### **Gate Level Minimization**

The Map Method, K Maps, input five variables, Product of Sums Simplification, Don't care conditions. Nand and NOR implementation. AND –OR invent, OR-AND invent implementation, Ex-OR function, Parity generation and checking, Hardware Description Language (HDL).

### **Combinational Logic**

Combinational Circuits, Analysis and Design Procedure; Binary Adder-Sub tractor, Decimal Adder, Binary Multiplier, Magnitude Comparator, Decoders, Encoders, Multipliers, HDL for Combinational Circuits.

## **Module III (12 Hours)**

### **Synchronous Sequential Logic**

Sequential Circuit, Latches, Flip-flop, Analysis of Clocked sequential Circuits, HDL for Sequential Circuits, State Reduction and Assignment. Design Procedure.

### **Registers and Counters**

Shift Register, Ripple Counters, Synchronous Counters Asynchronous Counter, Ring Counters, Modulo-N Counters, HDL for Registers and Counters.

## **Module IV (15 Hours)**

### **Memory and Programmable Logic**

Random Access Memory (RAM), Memory Decoding, Error detection and Correction, Read only Memory, Programmable Array Logic, Sequential Programmable Devices.

### **Register Transfer Levels**

Register transfer level notion, Register transfer level in HDL, Algorithm, State Machine, Design Examples. HDL Description of Design, Examples, Binary Multiplier, HDL, Description of Binary Multiplier.

### **Digital Integrated Logic Circuits**

RTL, DTL, TTL, ECL, MOS and CMOS logic circuits. Switch –lever-Modeling with HDL.

### **Text Book**

1. Digital Design, 3rd Edition by M. Morris Mano, Pearson Edu. India, Additional Reading Ch. ! to 10 except 9.
2. Digital Design – Principle & Practice, 3rd Edition by John F. Wokerly, Pub. Pearson Education.

## ***PRACTICALS***

### **BENG 9201 BASIC ELECTRICAL ENGINEERING LABORATORY (0-0-3)**

#### **List of Experiment (Any 8 of the following)**

1. Study and measurement the armature and field resistance of a DC machine.
2. Calibration of ammeter, voltmeter and wattmeter with the help of sub-standard instrument.
3. Verification of circuit theorems. Thevenin's and Superposition theorems (with DC source only).

4. Voltage-current characteristics of incandescent lamps and fusing time-current characteristics of fuse wire.
5. Measurement of current, voltages and power in R-L-C series circuit excited by Single Phase AC supply.
6. Connection and starting of a three phase induction motor using direct online (DOL). or star-delta starter.
7. Connection and measurement of power consumption of a fluorescent lamp.
8. Determination of open circuit characteristics (OCC) of DC machine.
9. Starting and speed control of a DC shunt motor.
10. Connection and testing of a single phase energy meter (unity power factor load only)
11. Study of fan motor

### **BENG 9202 BASIC ELECTRONICS LABAROTARY (0-0-3)**

(At least 8 experiments including 1 - 7 and any one from 8 - 10)

1. Familiarity with electronics components and Devices  
Testing of a semiconductor Diode and a Transistor. IC pins connection (Digital Multimeter should be used should be used in testing components and devices).
2. Study and use of Oscilloscope to view waveforms and measure its amplitude and frequency.
3. V - I Characterstic of a semiconductor diode. Determining DC and AC resistance.
4. Half wave and Full wave rectifiers without and with capacitor filter. Record of waveforms, Measurement of Average and rms values.
5. V - I Characterstics of anpn or pnp transistor. DC Biasing and measurement of dc voltages and currents.
6. Gain - frequency response of JFET common source R-C coupled amplifier/BJT CE RC coupled Amplifier.
7. Op amp in Inverting, non inverting, Integrating and Differentiating configuration, Record of wave forms.
8. Truth Tables of logic gates.
9. Study and experiment using MUX - DEMUX ICs / Shift Register IC.
10. Study on CMOS logic Inverter.

### **BCSE 9202 RDBMS LABORATORY (0-0-3)** **(10 Classes for 10 Different Programs)**

1. Use of SQL syntax : Insertion, Deletion, Join), Updation using SQL. (1 class)
2. Program segments in embedded SQL using C as host language to find average grade point of a student, etc.. (1 class)
3. Program for Log based data recovery technique. (1 class)
4. Program on data recovery using check point technique. (1 class)

5. Concurrency control problem using lock operations. (1 class)
6. Use of package (ORACLE) for programming approaches(2 classes)
7. Use of package (DB2) for programming approaches(2 classes)
8. Programs on JDBC/ODBC to print employee's / student's information of a particular department. (1 class)

### **CPES 9201 NETWORK DEVICES LABAROTARY (0-0-3)**

1. Verification of Network Theorems
2. Study of D.C. and A.C. transients RL, RC, and RLC circuits.
3. Determination of parameters of a 2 port network Z, Y, h and ABCD parameters.
4. Determination of frequency response, attenuation and phase characteristics of the following networks : Low Pass, High Pass, Band Pass and Band Elimination filters.
5. Study of a transformer as a coupled circuit and determination of its self and mutual inductance.
6. Response of single of double tuned coupled circuits.
7. Spectral analysis of a non - sinusoidal wave form.

### **BENG 9203 MECHANICAL ENGINEERING LABORATORY (0-0-3)**

#### **Group A (Mechanics / Material Testing Lab.**

1. Determination of equilibrium of coplanar forces.
2. Determination of Moment of Intertia of Flywheel
3. Determination of tensile strength of materials by Universal Testing Machine.

#### **Group B**

4. Determination of Metacentric Height and application to stability of floating bodies.
5. Verification of Bernoulli's Theorem and its application to Venturimeter.
6. Determination of Cd and Cd of Orifices.

#### **Group C**

7. Calibration of Bourden Type Pressure gauj and measurement pressure using manometers.
8. Study of Cut-Sections of 2 stroke and 4 stroke Diesel Engine.
9. Study of Cut-Sections of 2 stroke and 4 stroke Petrol Engine.

### **CPES 9203 DIGITAL ELECTRONICS CIRCUITS LABORATORY (0-0-3)**

#### **(10 experiments out of 13 should be done during the Semester)**

1. Digital Logic Gates : Investigate logic behaviour of AND, OR, NAND, NOR, EX-OR, EX-NOR. Invert and Buffer gates, use of Universal NAND Gate.
2. Gate-level minimization : Two level and multi level implementation of Boolean functions
3. Combinational Circuits: design construct and test : address and subtractors, code converters, gray code to binary and 7 segment display.
4. Design, implement and test a given design example with (i) NAND Gates only (ii) XOR Gates only and (iii) Decide and NAND Gates.
5. Design with multi-plexers and de-multiplexers.

6. Flip-Flap : construct, Test and investigate operation of SR, D & J-K flipflops.
7. Shift Registers : Investigate the operation of all types of shift registers with parallel load. Design.
8. Counters : Design, construct and test various ripple and synchronous counters – decimal counter, Binary counter with parallel load.
9. Memory Unit : Investigate the behaviour of RAM unit and its storage capacity – 16 X 4 RAM : testing, simulating and memory expansion.
10. Clock-pulse generator- design, implements and test.
11. Parallel adder and accumulator : design, implement and test.
12. Binary Multiplier : design and construct a circuit that multiplier 4-bit unsigned numbers to produce a 8-bit product.
13. Verilog HDL simulation of experiments : choose any form SI No 3 to 12 and implement it.

## 5<sup>th</sup> Semester

### HSSM 4301 OPTIMIZATION IN ENGINEERING (3-0-0)

Course Objective : The course aims at acquainting the students to mathematical modeling of engineering design, operation and maintenance problems and their optimization algorithms.

#### **Module – I** (10 hours)

Formulation of engineering optimization problems : Decision variables, objective function and constraints. Example of typical design, operation and maintenance problems in engineering : Design of a water tank, design of a truss, design of a network (electrical, communication sewerage and water supply networks), product mix problem, transportation and assignment problems, shift scheduling of employees, design of reliable devices, design of reactors, shortest route problem, set covering problem, traveling salesman problems. Only physical problems and their mathematical models to be discussed.

Linear Programming Problem : Formulation, Graphical solution, Simplex method, Duality theory, Dual simplex method, Formulation and solution of engineering problems of planning and scheduling.

#### **Module – II** (10 hours)

Sensitivity Analysis, Transportation Problem, Assignment Problem, Network Models : Minimal Spanning Tree Problem, Maximal Flow Problem, Shortest Route Problem, Minimum Cost Flow Problem. Algorithms and applications to be covered.

#### **Module – III** (10 hours)

Integer Linear Programming Problem. Branch and Bound and Cutting Plane Methods. Zero-one Programming Problem, Knapsack Problem, Set covering Problem, Set Partitioning Problem, Traveling Salesman Problem. Deterministic Dynamic Programming Problems. Applications and algorithms to be discussed.

#### **Module – IV** (12 hours)

Queueing theory, Game theory, Simulation, Decision theory & Sequencing Problem

#### **References :**

1. H. A. Taha – Operations Research, Prentice Hall of India, 2004.
2. D. T. Phillips, A Ravindran and J.J. Solaberg, Principles of Operation Research, John Wiley and Sons
3. S. Kalavathi, Operations research, Vikash Publication.
4. B.E Gillett, Introduction to operations research, TMH

### CPEE 5301 ELECTRICAL MACHINE- I (3-1-0)

#### **MODULE – 1 (10 hours)**

1. Basic Principles of production of torque and generation of emf; Generalised equations of torque and voltage DC Machine: Construction; outline of simplex lap and wave Winding; elementary idea about multiplex winding; EMF equation as a generator and torque equation as a motor; Armature reaction and its effects; commutation, brush shift; interpoles; compensating winding. Methods of excitation.

2. D.C. Generator: No load characteristics; conditions for self excitation - Critical resistance and speed; operation of separately excited, shunt excited, series excited and compound excited generators under load conditions; parallel operation.

#### **MODULE – 2 (8 hours)**

3. D.C. Motor: Back EMF; speed equation; speed torque, speed current and torque current characteristics of shunt, series and compound motors; speed control by variation of flux, by variation of armature resistance, by variation of voltage. Use of variable voltage rectifier and chopper for controlling speed (only Block diagram to be given). D.C. Motor starting and starters; losses and efficiency; Swinburn's test, brake test and Hopkinson's test

#### **MODULE – 3 (8 hours)**

4. Single phase transformers: Construction; EMF equation; ideal transformer; voltage and current ratio, development of equivalent circuit of an actual transformer, phasor diagram, voltage regulation; losses and efficiency; condition of maximum efficiency; All day efficiency; determination of parameters from OC & SC tests; back to back test; per unit representation; parallel operation and load sharing.
5. Single phase auto transformer: Construction; principles of operation; equivalent circuit, rating, comparison with 2 winding transformer (4 hours)
6. Three phase synchronous machine: Construction of cylindrical rotor and salient pole machines; advantages of rotating poles type; Air gap flux density and mmf; poly phase armature winding, induced EMF; winding factors; harmonics in EMF and its elimination

#### **MODULE – 4 (10 hours)**

7. Armature resistance and leakage reactance; Armature reaction at various pf. Loads; rotating magnetic field;
8. Cylindrical rotor type synchronous generator: phasor diagram; armature reaction reactance; synchronous reactance and impedance, OC & short circuit tests; determination of synchronous reactance; short circuit ratio, ZPF characteristics; Potier reactance; Calculation of regulation by synchronous impedance method, ZPF method, mmf method; modified mmf method, Power angle equation and power angle characteristics.

#### **Text Books :**

- 1) Electrical Machines by P.K. Mukherjee & S. Chakravorty (Dhanpat Rai)
- 2) Electrical Machines, S. Ghosh, Pearson

#### **References:**

1. Electrical Machine by Nagrath & Kothari

## CPEE 5302 CONTROL SYSTEM ENGINEERING (3-1-0)

**Module - I  
(10 hours)**

(10)

### **Introduction :**

Basic concepts of control systems, Open loop and closed loop systems, difference between open loop and closed loop systems, classifications

Mathematical model of physical systems, transfer function, block diagram algebra, signal flow graph (SFG), Mason's gain formula, application of SFG to control systems

**Feed back theory :** Types of feedbacks, effect of degenerative feedback on control system, regenerative feedback.

**Components :** A.C. Servo motor, DC servo motor, AC tachometer, synchros, amplidyne, stepper motor

### **Module – II (10 hours)**

Time domain analysis: Standard test signals: Step, ramp, parabolic and impulse signals. Time response of 1<sup>st</sup> and 1<sup>st</sup> order systems to unit step and unit ramp inputs. Time response of second order systems to unit step input. Time response specifications. Steady state errors and error constants of different types of control systems Generalised error series method

**Concepts of stability :** Necessary conditions of stability, Hurwitz stability criterion, Routh stability criterion, application of Routh stability criterion to linear feedback systems, relative stability

### **Module – III (12 hours)**

Root locus techniques: Root locus concepts, rules for construction of root loci, determination of roots from root locus, root contours. systems with transportation lag

Frequency domain analysis: Introduction, Bode plots, determination of stability from Bode plots, polar plots, Nyquist stability criterion, application of Nyquist stability criterion to linear feedback systems

### **Module – IV (8 hours)**

Closed loop frequency response: Constant M circles, constant N circles, use of Nichols chart

Controllers: Introduction, Proportional, derivative and integral control actions, PO, PI and PID controllers and their applications to feedback control systems, Zeigler- Nichols method of tuning PID controllers for known dynamic model of the plant.

### **Text Books :**

1. Modern Control Engineering by D. Roy Choudhury, PHI
2. Modern Control Engineering by K. Ogata, PHI
3. Control Systems Engineering by L.J. Nagrath, M. Gopal, Third Edition, New Age International Publishers.

**Reference Books :**

1. System Dynamics and Control: Eroni Umez Erani, PWS Publishing, International Thompson Publishing Company
2. Control System, Theory & Applications by Sama\_it Ghosh, Pearson Education

**CPEE 5303 TRANSMISSION AND DISTRIBUTION (3-0-0)**

**MODULE –I**

**12 hours**

General Introduction to power transmission by D.C. and A.C. overhead lines.

Lines Constants

Resistance, inductance and capacitance of single and three phase lines with symmetrical and unsymmetrical spacing transposition, charging current, skin effect and proximity effect

**Performance of transmission Lines**

Analysis of short, medium and long lines, equivalent circuit, representation of the lines and calculation of transmission parameters, use of static or synchronous condensers for improvement of regulation.

**MODULE –II**

**9 hours**

Corona

Power loss due to corona, practical importance of corona, and inductive interference with neighbouring communication lines, use of bundled conductors in e.h.v. transmission lines and its advantages

Overhead line Insulators

Voltage distribution in suspension type insulators, method of equalizing, voltage distribution, economic use of insulators.

Mechanical Design of Overhead Transmission Line

Sag and stress calculation, tension and sag at erection, effect of ice and wind, vibration dampers

**MODULE –III**

**9 hours**

Under Ground Cables

Type and construction, grading of cables, capacitance in 3 core cables and dielectric loss

Distribution System

Effect of System voltage on transmission efficiency.. Economic choice of conductor size, Kelvin's Law, types of distributors and feeders (radial & ring), voltage drop and load calculation for concentrated and distributed loads.

Substation & Earthing

Types of substations, arrangement of busbars and control equipments, solid earthing, resistance earthing and Peterson coil

**MODULE – IV**

**6 hours**

E.H.V. (AC.) & H.V. (D.C.) Transmission

Introduction, advantages and disadvantages of E.H.V. (AC.) H.V. (D.C.) Transmission

Symmetrical components:

Symmetrical Components and their applications in analysis of unbalanced faults.

**Text Books :**

- 1) Electric Power Generation, Transmission and Distribution, S. N. Singh (PHI)
- 2) Power System Analysis and Design, V. K. Meheta
- 3) Electric Power Systems: C. L. Wadhwa
- 4) Electric Power: S. L. Uppal
- 3) A Course in Electric Power: Soni, Gupta & Bhatnagar

**CPEC 5305 MICROPROCESSOR & MICRO CONTROLLER (3-1-0)**

**Module - I  
(12 hours)**

**Microprocessor Architecture:-** Introduction to Microprocessor and Microcomputer Architecture, Pins & Signals, Register Organization, Timing & Control Module, 8085 Instruction Timing & Execution. Instruction Set and Assembly Language Programming of 8085:- Instruction set of 8085, Memory & I/O Addressing, Assembly language programming using 8085 Instruction Set, use of Stack & Subroutines.

**Memory Interfacing:-** Interfacing EPROM & RAM Memories: 2764 & 6264,

**Interrupts :-** 8085 Interrupts

**MODULE – II  
(12 hours)**

**Microprocessor Based System Development Aids:-** Programmable Peripheral Interface: 8255, Programmable DMA Controller: 8257, Programmable Interrupt Controller: 8259

**Microcontroller (Architecture and Programming):-** Introduction to 8051 Microcontrollers (Architecture, Pin description), 8051 Assembly Language Programming (JUMP, LOOP, CALL Instructions), I/O Port Programming, 8051 Addressing Modes, Arithmetic & Logic Instructions

**MODULE – III  
(12 hours)**

Microcontroller Interrupts and Interfacing to 8255:- 8051 Interrupts, Interfacing to 8255

**Intel 8086 (16 bit processors):-** 8086 Architecture, Addressing Modes, Instruction Format, Pins & Signals, 8086 Basic System Concept, Interfacing with Memories, 8086 Interrupts.

**MODULE – IV**

**(11 hours)**

**Intel 80386 :-** Introduction to 80386 Microprocessor, Architecture, Pins & Signals, Memory System, Registers, 80386 Memory Management, Paging Technique, Protected Mode Operation, brief introduction to 80387 Math Coprocessor.

**Pentium Processors (Only features) :-** Introduction to Pentium Processors, Memory System, Input/Output System, B (only the features of Pentium Processor mentioned above are to be discussed)

## TEXT BOOKS

1. 0000 to 8085 – Introduction to Microprocessor for Scientists & Engineers by Ghosh & Sridhar, PHI publication (for Module I to Module – III)
2. Advanced Microprocessor and Peripherals (Architecture, Programming & Interfacing) by A.K. Roy & K.M. Bhurchandi – TMH Publication (For Module-V to Module- VII)
3. The 8051 Microcontroller & Embedded Systems by Mazidi & Mazidi – Pearson / PHI publication (For Module-IV)
4. Microcontrollers [theory and applications] TMH publication by Ajay V. Deshmukh. (Chapter – 2 to Chapter – 6)
5. Microprocessors and programmed logic (2<sup>nd</sup> Edition), Pearson Education by Kenneth L. Short

## CPEN 5306 INSTRUMENTATION & MEASUREMENTS (3-0-0)

### • MODULE – I (12 hours)

#### Measuring Instruments

Classification, Absolute and secondary instruments, indicating instruments, control, balancing and damping, constructional details, characteristics, errors in measurement

#### Wattmeters

Electrodynamometer type, induction type, single phase and three phase wattmeters, compensation.

#### Energymeters

AC. Induction type single phase and three phase energy meter, compensation,... creep, error, testing

#### Frequency Meters

Vibrating reed type, electrical resonance type

### MODULE – II (10 Hours)

#### Instrument Transformers

Potential and current transformers, ratio and phase angle errors, phasor diagram, methods of minimizing errors; testing and applications

#### Galvanometers

General principle and performance equations of D'Arsonval Galvanometers, Vibration Galvanometer and Ballistic Galvanometer; undamped, underdamped and overdamped motion of galvanometer. Measurement of charge and flux by Ballistic Galvanometer.

#### Potentiometers

D.C. Potentiometer-Crompton potentiometer, construction, standardization, application. AC. Potentiometer-Drysdale polar potentiometer; Gall Tinsley coordinate type potentiometer, standardization, application.

### MODULE –III (9 Hours)

#### DCI AC Bridges

General equations for bridge balance, measurement of self inductance by Maxwell's bridge (with variable inductance & variable capacitance), Hay's bridge, Owen's bridge, measurement of capacitance by Schering bridge, errors, Wagner's earthing device, Kelvin's double bridge.

## Transducer

Strain Gauges, Thermistors, Thermocouples, Linear Variable Differential Transformer (LVDT) Capacitive Transducers, Piezo-Electric transducers, Optical Transducer, Torque meters, inductive torque transducers, electric tachometers, photo-electric tachometers.

## MODULE – IV (9 Hours)

### Electronics Instruments

**CRG:** Block diagram, Sweep generation, vertical amplifiers, use of CRG in measurement of frequency, phase, Amplitude and rise time of a pulse.

**Digital Multimeter :** Block diagram, principle of operation, Accuracy of measurement.

**Electronic Voltmeter :** Transistor Voltmeter, Block diagram, principle of operation, Accuracy of measurement-:metering amplifier.

**Electronic voltmeter:** Transistor Voltmeter, Block diagram, principle of Operation, accuracy of measurement.

**Digital Frequency meter:** Block diagram, principle of operation, typical features accuracy of measurement

### Reference Books:

- 1) A Course in Elec. & Electronics Measurements & Instrumentation: A K. Sawhney
- 2) Electronic Instrumentation and Measurement techniques: W.O. Cooper
- 3) Electronic Measurement & Instrumentation Systems: Larry Jones & A Foster Chin
- 4) Electrical Measurement and Measuring Instruments - Golding & Waddis

## PRACTICALS

### CPEE 9301 CONTROL AND INSTRUMENTATION LAB. (0-0-3)

#### CONTROL: (Any five)

1. Study of a DC Speed control system and determination of transfer function of a permanent magnet dc motor.
2. Study of a two-phase AC servomotor and its transfer function parameters.
3. Find the frequency response of a Lag and Lead compensator.
4. To observe the time response of a second order process with P, P+I, P+I+D control and apply PID control to a DC servomotor.
5. To study the characteristic of a relay and analyze the relay control system (Phase Plane).
6. Study of a DC position control system
7. Study of a linear system simulator

#### INSTRUMENTATION: ( Any five)

1. Measurements of unknown resistance, inductance, and capacitance using Bridges.
2. To plot the displacement –voltage characteristics of the given LVDT.
3. Measurement of temperature-voltage characteristics of J-type thermocouple.
4. Use a strain gauge to plot the curve between strain applied to a beam and the output voltage.
5. Study of resistance-voltage characteristics of Thermistors
6. Measurement of angle using Capacitor type transducers.
7. Plot the output characteristics of a torque transducer

8. Study of a Data Acquisition System

**CPEC 9304 MICROPROCESSOR & MICROCONTROLLER LAB. (0-0-3)**

**A) 8085**

1. Addition, Subtraction, Multiplication, Division two 8 bit numbers resulting 8/16 bit numbers.
2. Smallest /Largest number among n number in a given data array + Binary to Gray Code / Hexadecimal to decimal conversion. **(1 hour)**

**B) INTERFACING**

**(5 hours)**

**COMPULSORY**

1. Generate square waves on all lines of 8255 with different frequencies (concept of delay program) 1 lecturer)
2. Study of stepper Motor and its operations (Clockwise, anticlockwise, angular movement, rotate in various speeds)

**OPTIONAL (Any Two)**

**(1 hour)**

1. Study of Traffic Light controller
2. Study of Elevator Simulator
3. Generation of Square , triangular and saw tooth wave using Digital to Analog Converter
4. Study of 8253 and its operation (Mode 0, Mode 2, Mode 3)
5. Study of Mode 0, Mode 1, BSR Mode operation of 8255.
6. Study of 8279 (keyboard & Display interface)
7. Study of 8259 Programmable Interrupt controller.

**C) 8051 MICROCONTROLLER**

**(3 hours)**

**COMPULSORY**

**(2 hours)**

1. Initialize data to registers and memory using immediate, register , direct and indirect addressing mode

**OPTIONAL (any one)**

**(1 lecture)**

1. Addition, subtraction of 16 bit numbers.
2. Multiplication, Division of 16 bit numbers
3. Transfer a block of data to another memory location using indexing.
4. Operation of 8255 using 8051 microcontroller

**D) 8086**

**(2 hours)**

**COMPULSORY**

**(1 hour)**

1. Addition, subtraction, Multiplication , Division of 16 bit nos + 2's complement of a 16 bit no.
1. Finding a particular data element in a given data array.
2. Marking of specific bit of a number using look-up table.
3. Largest /Smallest number of a given data array.
4. To separate the Odd and Even numbers from a given data array.
5. Sorting an array of numbers in ascending/descending order

**Total – 13 hours**

NOTE

Total 10 (Ten) experiments have to be completed .

Two from GP-A , four from Gp- B, Two from Gp – C Two from Gp – D

### **CPEE 9302 ELECTRICAL MACHINES LAB - I (0-0-3)**

1. O.C and S.C test on single phase transformer
2. Parallel operation of two single phase transformer
3. Back –to-back test of Single phase transformer
4. Transformer connection : Y to Y, Y to  $\Delta$  , Scott connection, 3 phase to 6 phase, ZIGZAG connection YD1, YD11
5. No load and load characteristics of DC shunt generator
6. Speed control of D.C motor by armature voltage and field excitation control
7. Open circuit and short circuit tests of an alternators
8. Synchronizing of an alternator to infinite bus
9. No load and blocked rotor test of an induction motors
10. Load characteristics of a 3 phase induction motor

## 6<sup>th</sup> Semester

### HSSM 4302 PRODUCTION AND OPERATIONS MANAGEMENT (3-0-0)

**Objective :** This course aims at acquainting all engineering graduates irrespective of their specializations the basic issues

#### Module I

1. Operation Function in an Organization, Manufacturing Vrs Service Operation, System view of Operations, Strategic Role of Operations, Operations Strategies for Competitive Advantages, Operations Quality and Productivity Focus, Meeting Global Challenges of Production and Operations Imperatives.

**(3 hours)**

2. Designing Products, Services and Processes New Product Design : Product Life Cycle, Product Development Process, Product Quality and Reliability Design, Process Technology : Project , Jobshop, Batch, Assembly Line, Continuous Manufacturing, Process Technology Life Cycle, Process Technology Trends; FMS, CIM, CAD, CAM, GT, Design for Services, Services Process Technology, Services Automation. Value Engineering, Standardization, Make or buy Decision.

**(4 hours)**

3. Job Design and Work Measurement, Method Study : Techniques of Analysis, recording, improvement and standardization. Work Measurement : Work Measurement Principles using Stopwatch Time Study, Predetermined Motion Time Standards and Work Sampling, Standard Time Estimation.

**(4 hours)**

#### Module II

4. **Location and Layout Planning** : Factor Influencing Plant and Warehouse Locations, Impact of Location on cost and revenues. Facility Location Procedure and Models : Qualitative Models, Breakeven Analysis, Single Facility, Location Model, Multi-facility Location Model, Mini max Location, Total and Partial Covering Model.

**Layout Planning** : Layout Types : Process Layout, Product Layout, Fixed Position Layout Planning, Systematic

Group Technology and Cell Formation, Rank Order Clustering Method for Machine – Component Assignment,. Line Balancing : Basic concepts, General Procedure, Rank Positional Weight Method.

**(7 hours)**

5. **Forecasting** : Principles and Method, Moving Average, Double Moving Average, Exponential Smoothing, Double Exponential Smoothing, Winter's Method for Seasonal Demand, Forecasting Error Analysis.

#### Module III

6. **Manufacturing Planning and Control** : The Framework and Components : Aggregate Planning, Master Production Scheduling, Rough-cut-Capacity Planning, Material Requirements Planning, Capacity Requirements Planning, Shop Order System and Purchase Order System. Transportation Method for Aggregate Production Planning, Material Requirement Planning, Scheduling and Dispatching Functions, Progress Monitoring and Control.

**(4 hours)**

7. **Sequencing and Scheduling** : Single Machine Sequencing : Basics and Performance Evaluation Criteria, Methods for Minimizing Mean Flow Time, Parallel Machines : Minimization of Makespan, Flowshop sequencing : 2 and 3 machine cases : Johnson's Rule and CDS heuristic. Jobshop Scheduling : Priority dispatching Rules.

8. **Inventory Control** : Relevant Costs, Basic EOQ Model, Model with Quantity discount, Economic Batch Quantity, Periodic and Continuous Review Systems for Stochastic Systems, Safety Stock, Reorder Point and Order Quantity Calculations. ABC Analysis. **(4 hours)**

**Module - IV**

9. **Project Management** : Project Management through PERT / CPM. Network Construction, CPM, Network Calculation, Crashing of Project Network, Project Scheduling with Limited Resources. Line of Balance. **(5 hours)**

10. **Modern Trends in Manufacturing** : Just in Time (JIT) System; Shop Floor Control By Kanbans, Total Quality Management, Total Productive Maintenance, ISO 9000, Quality Circle, Kaizen, Poke Yoke, Supply Chain Management **(6 hours)**

**Reference :**

1. J. L. Riggs : Production Systems : planning Analysis and Control, John Wiley.
2. E. E Adam and R. J. Ebert " Production and Operation Management", Prentice Hall of India, 2004.
3. S.N. Chary, " Production and Operations Management", Tata McGraw Hill.
4. R. Paneerselvam, "Production and Operation Management, Prentice Hall of India, 2005.

**Module – I**

**(12 hours)**

**Operation of salient pole synchronous alternator :**

Two reaction theory, phasor diagram, direct and quadrature axis reactances, voltage regulation, power angle equation and characteristics; slip test.

Synchronization of alternators; synchronizing power and torque; parallel operation; load sharing, operation of alternators connected to infinite bus bar.

3 phase synchronous motor connected to infinite bus bar; principles of torque production; torque and power expressions in cylindrical rotor and salient pole rotors, approximate relation with armature resistance neglected; power-angle characteristics for both type of motors; v-curves; starting of synchronous motor. Hunting and its remedy; use as a synchronous condenser and other uses.

**Module – II**

**(9 ours)**

**3 phase transformer :-** Construction of core type and shell type transformers, Three single phase transformers connected as a bank of 3 phase transformer;

Transformer connection - YY, Y<sub>0</sub>, Y, M, Δ, zig zag, Y zig zag. Phase displacement of primary and secondary voltages for different connections, vector groups. Two single phase transformers connected as open delta. Rating of such transformers; Phase conversion :- 3 phase to 6 phase; 3 phase to 12 phase; T connection of 2 single phase transformers to have 3 phase to 3 phase; 3 phase to 2 phase and vice versa. Parallel operation of 3 phase transformers, 3 winding transformer and its equivalent circuit, Time harmonics in single phase and 3 phase transformers; causes and remedy; floating neutral; switching in transients.

**Module – III**

**(10 hours)**

Poly phase induction motor' construction - cage & wound rotor type; principle of operation, speed and slip; equivalent circuit and phasor diagram; power and torque expressions, slip torque characteristics and effect of rotor resistance on it; no load and blocked rotor test; determination of parameters, circle diagram and determination of performances curves

Starting of both types of motors; Speed control by change of voltage, rotor resistance, no. of poles and frequency. Speed control by slip power recovery method and voltage injection method, cascading

Cogging & Crawling - Causes & remedy Principle of induction generator

**Module – II****(09 hours)**

Single phase induction motor. Double revolving theory, torque-slip characteristics, starting methods: Split phase starting - Use of resistance or capacitance, shaded pole starting, starting as a repulsion motor.

A.C. Series motor - Construction and operation; plain and compensated series motor; problems in commutation and their remedy; phasor diagram; universal motor. \_  
Repulsion motor - Construction and principles of operation, repulsion induction motor.

**Special machines, their construction and principles of operation :**

Reluctance motor, hysteresis motor; stepper motor, AC servomotor, linear motor Single and three phase induction regulator

**Text Books :**

1. Electrical Machines, S. Ghosh, Pearson Publication
2. Electrical Machines by P.K. Mukherjee & S. Chakravorty (Dhanpat Rai)
3. Theory and Performance of AC Machines - (M.G. Say)

**References :**

1. Electrical Machines, Charles Hubert, Pearson
2. The Performance & Design of A.C. Commutator motors by E.G. Taylor

**CPEC 5302 DIGITAL SIGNAL PROCESSING (3-0-0)****Module – I****(10 hours)**

Discrete Time Signals and System

Discrete Time Signals (Elementary examples, classification : periodic and aperiodic Signals energy and Power signals, Even and Odd Signals) .

**Discrete Time System :**

Block diagram representation of discrete time systems, classification of discrete time systems –static and dynamic, time variant and time – invariant, linear and non-linear, causal and anti-causal, stable and unstable.

Analysis and response (convolution sum) of discrete - time linear LTI system, Recursive and Non-recursive discrete time system. Constant coefficient difference equations and their solutions, impulse response of LTI system, structures of LTI systems Recursive and Non-recursive realization of FIR system. Correlation of discrete time Signal.

Selected portions from Chapter 2 (2.1, 2.2,2.3,2.4,2.5, 2.6.1) of Textbook – I  
Chapter 1 of Textbook- 2.

**Module – II****(10 hours)**

The Z transform

The Z-transform and one-sided Z-transform, properties of Z-transform, inverse of the Z-transform, Solution of difference equations.

Selected portions from Chapters 3 (3.1, 3.2,3.5) of Textbook – I  
Selected portion of chapter 4 of Textbook - 2

The Discrete Fourier Transform

The DFT and IDFT, relationship, DFT with Z- transform, the DFT as a linear transformation Relationship of DFT with Z-transform, properties of DFT: periodicity, linearity, symmetry and time reversal of a sequence.

Circular convolution, circular correlation, circular correction by convolution, method linear convolution by overlap save methods and by overlap add method, Circular convolution and correlation by DFT method, Overlap add and save filtering by DFT method.

Selected portion from Chapter – 5 (5.1.2,5.1.3,5.1.4,5.2,5.2.1,5.2.2, 5.2.3, 5.3.2) of textbook – 1.  
Selected portion of chapter 6 of textbook - 2.

### **Module- III**

**(10 hours)**

#### **Fast Fourier Transform :**

Operation counts by direct copulation of DFT, Radix – 2 FFT algorithm- Decimation –in-time (DIT) and Decimation – in frequency (DIF) algorithm, Efficient computation DFT of Two real sequences , Efficient Computation of DFT of a 2 N-pt real sequences.

Selected portions from chapter 6 (6.1.1,6.1.3, 6.2.1, 6.2.2) of Text book –I  
Selected portions from chapter 7 and 8 of Text book – 2.

#### **Design and Digital Filters :**

Casually and its implication, Design of linear phase FIR filters using different windows. Design of IIR filters – Impulse Invariance Method and Bilinear transformation method.

Selected portions from chapter 8 (8.1.1, 8.2.1, 8.2.2., 8.3.2,8.3.3.) of Text book – I

### **Module – IV**

**(10 hours)**

Estimation of spectra from finite duration signals, Non-parametric method of power spectrum estimations.

The Bartleff method and the Blackman and Tukey method.

Selected portion from chapter 12 of Text book - 1: 12.1,12.1.1,12.1.2,12.1.3,12.2.1, 12.2.3.  
Selected portion from chapter 12 of Text book – 2

Implementation of Discrete Time System structure of FIR systems – Direct form, cascaded form.

Structure IIR Systems - Direct form I & II realizations

Selected portions from chapter 7 (7.2, 7.2.1, 7.2.2, 7.3, 7.3.1 ) of Text book –I

Selected portions from chapter 9 of Text book – 2.

#### **Text Books**

1. Digital Signal Processing – Principles, Algorithms and Applications by J. G. Proakis and D. G. Manolakis, 3<sup>rd</sup> Edition, Pearson.
2. Digital Signal Processing by S. Salivahanan, TMH

#### **Reference Book :**

Introduction of Digital Signal Processing – J. R. Johnson, PHI.

## **CPEE 5305 ADVANCED CONTROL SYSTEM ENGINEERING (3-0-0)**

### **Module – I**

**(10 hours)**

Mathematical modeling of dynamic systems in state space, state space representation of Mechanical and Electrical systems, State equations and transfer functions, Characteristics equation, Eigenvalues

and Eigenvector of state matrix, Solution of time-invariant state equation, determination of State Transition Matrix, use of Cayley –Hamilton Theorem, Minimal, Polynomial, Sylvester's interpolations, controllability, observability

**Module – II**

**(8 hours)**

Introduction to design of control systems in state space, design of phase lead and phase lag controllers in time and frequency domain, pole placement design, State observers.

**Module - III**

**(14 hours)**

Sampling and Signal reconstruction : definition and Evaluation of Z-Transform, properties of Z-Transform, Inverse Z-Transform, Mapping between S-plane and Z-plane, system descriptions by difference equations and solutions.

Sample data control systems : transfer function of discrete data systems, Pulse and Z-Transform functions, transfer function of discrete data systems with cascade elements, transfer functions of Zero order and 1<sup>st</sup> order holds, transfer function of closed loop discrete data systems, State equation of discrete data systems, solution of discrete state equations, discrete state transition equation, Z-Transform solutions of discrete equations, Transfer function matrix and the Characteristics equation, stability Tests of discrete state equations, Bilinear Transformation method, direct stability Tests.

**Module – IV**

**(10 hours)**

Nonlinear systems : Common physical nonlinearities, the phase plane methods, Basic concepts, Singular points, stability on nonlinear systems, Construction of phase trajectories, Construction by analytical and graphical methods, System analysis by phase plane method, the describing function methods : Basic concepts, derivation of describing functions for common nonlinearities, stability analysis by Describing function approach, Jump resonance, Lyapunov stability criterion, Popov's stability criterion

**Text Books**

1. Modern Control Engineering, K. Ogata, PHI
2. Automatic Control System, B.C. Kuo, PHI
3. Digital Control of Dynamic System, G. Franklin, J. D Powell, M. Workman, Pearson

**CPEE 5306 POWER ELECTRONICS (3-0-0)**

**Module – I**

**(12 hours)**

Power Semiconductor Devices: Power diodes, Power Transistors and Thyristors, Static V-I Characteristics of SCR, TRIAC, GTO & IGBT, Turn-On & Turn-OFF Mechanism of SCR, its gate characteristics , Device Specification and rating , series and parallel operation, thyristor protection circuits, design of snubber circuit.

**Triggering Circuits :**

Types of triggering schemes : DC, AC & pulsed triggering, UJT triggering scheme, R-C triggering scheme, cosine – law triggering scheme.

Commutation.

Principle of natural commutation and forced commutation, circuits for forced commutation ( Resonant commutation, self commutation, auxiliary commutation, complementary commutation, external pulse commutation

**Module-II**

**(10 hours)**

Control Rectifiers (AC to DC Converter )

Single Phase- Circuit Configuration and Principle of operation of operation of half wave, full wave controlled rectifiers (full converters and semi converters ) wave form of voltage and current at the output and across the thyristor for R-L & R-L-E load, effect of source inductance, importance of free wheeling diode for inductive loads. Input power factor for R & R-L load, Ripple factor. Average output voltage and currents.

**Three Phase Controlled Rectifiers :**

Half wave and full wave full controlled bridge rectifiers. Three phase semi-converters, average output voltage and current for R & R-L load.

**Module – III**

**(10 hours)**

**Inverters (DC to AC Converters ) :**

**Single Phase – Series inverters :** Circuit description and principle of operation for simple and improved circuit. Parallel inverter : Basic circuit description and principle of operation without and with feed back diodes.

Bridge Inverters: Principle of operation :

Principle of operation of modified Mc Murray & Mc Murray Bedford inverters . Concept of voltage source inverter & current- source inverter.

**Three Phase :** Concept of three phase bridge inverters, principle of operation ( $180^\circ$  conduction mode &  $120^\circ$  conduction mode ), wave form of output voltage and current for R & RL load.

**Module – II**

**(10 hours)**

**DC Choppers :**

Basic Principles of class A, B, C, D, E Choppers, voltage commuted chopper, current commutated chopper and load commutated chopper.

Jones Chopper & Morgan Chopper .

**Cyclo Converter (Single Phase) :**

Basic Principle of Single phase Mid Point Cyclo Converters and bridge types cyclo converters.

Application:

Over voltage protection, zero voltage switch, integral cycle triggering (or Burst Firing), Uninterruptible power supply (UPS), Arc welding, HVDC transmission.

**Text Book :**

1. Power Electronics, Singh & Khanchandani TMH
2. Power Electronics, P. S. Bhimbra, M.H. Rashid, Pearson

**Reference Book :**

1. Power Electronics – P. C. Sen TMH.

**CPEE 5307 ELECTROMAGNETIC THEORY (3-0-0)**

**Module – I**

**(12 hours)**

The Co-ordinate Systems; Rectangular, Cylindrical, and Spherical Co-ordinate System. Co-ordinate transformation. Gradient of a Scalar field, Divergence of a Vector field and Curl of a Vector field. Their Physical interpretation. The Laplacian. Divergence Theorem, Stokes' Theorem. Useful Vector identities .

**Electrostatics :**

The experimental law of Coulomb, Electric field intensity. Field due to a line charge, Sheet Charge and Continuous Volume Charge distribution. Electric Flux and Flux Density; Gauss's law. Application of Gauss's law. Energy and Potential . The Potential Gradient. The Electric dipole. The

Equipotential surfaces. Energy stored in an electrostatic field. Boundary Conditions. Capacitors and Capacitances. Poisson's and Laplace's equations. Solutions of Simple Boundary value problems. Method of Images.

#### **Module – II**

**(11 hours)**

**Steady Electric Currents** : Current densities , Resistance of a Conductor; The Equation of Continuity . Joules law. Boundary Conditions for Current densities. The EMF.

#### **Magnetostatics :**

The Biot-Savart law. Amperes' Force Law . Torque exerted on a current carrying loop by a magnetic field. Gauss's law for magnetic fields. Magnetic Vector Potential . Magnetic Field Intensity and Ampere's Circuital law. Boundary conditions. Magnetic Materials . Energy in magnetic field . Magnetic circuits. Application to cathode Ray Oscilloscope.

#### **Module – III**

**(11hours)**

Faraday's Law of Induction; Self and Mutual inductance . Maxwell's Equations from Ampere's and Gauss's Laws. Maxwell's Equations in Differential and Integral forms; Equation of Continuity. Concept of Displacement Current. Electromagnetic Boundary Conditions.

Poynting's Theorem , Time – Harmonic EM Fields . Application to Transformer.

#### **Plane wave Propagation :**

Helmholtz wave Equation. Plane wave solution. Plane wave propagation in lossless and lossy dielectric medium and conducting medium . Plane wave in good conductor, surface resistance , depth of penetration. Polarization of EM wave - Linear, Circular and Elliptical polarization. Normal and Oblique incidence of linearly Polarized wave at the plane boundary of a perfect conductor, Dielectric – Dielectric Interface . Reflection and Transmission Co-efficient for parallel and perpendicular polarizations , Brewstr angle.

#### **Module – IV**

**(10 hours)**

#### **Antennas :**

Physical Concept of radiation from an antenna. Wave equations in terms of Potential Functions. The Concept of retarded Vector Potential . Hertzian Dipole: Near Zone Fields, Radiation Fields, Radiation resistance, Directive gain and Directivity. A Magnetic Dipole. A Short dipole Antenna. The Half wave Dipole Antenna. Monopole Antenna. Pattern Multiplication Antenna Arrays, Linear Arrays. Receiving Antennas.

#### **Text Books**

1. Electromagnetic Field Theory, Fundamental by B. S. Guru & Huseyn R. Hiziroglu. Publication : Thomson Asia Pte. Ltd. Singapore. Vikas Publishing Home Pvt. Ltd. New Delhi.
2. Electromagnetic waves and Radiating Systems E. C. Jordan & K. G. Balmin, 2<sup>nd</sup> Edition. PHI Pvt. Ltd.

#### **Additional Reading :**

1. Elements of Electromagnetic by Mathew N. O. Sadiku, Publisher Oxford University Press.

2. Fields and Wave Electromagnetics, By David K. Cheng, 2<sup>nd</sup> Edition , Publisher : Pearson Education.

### **PRACTICALS**

#### **CPEE 9303 DESIGN OF ELECTRICAL POWER APPARATUS LAB. (0-0-3)**

1. Computer aided design of a Single-Phase Transformer using MATLAB
2. Optimized design of a 3-phase synchronous generator using MATLAB and hence find out its reactances, voltage regulation and efficiency on load.
3. Induction motor design using MATLAB

#### **Text Books**

Electrical Machines, Analysis and Design applying MATLAB by J.J.Cathey, Tata Mc-GrawHill

#### **CPEE 9304 ELECTRICAL MACHINE LAB - II (0-0-3)**

1. To determine the voltage regulation of an alternator by zero power factor method
2. To determine the V curve and inverted V curve of a synchronous motor
3. Speed control of a 3 phase induction motor by rheostatic, cascading and pole changing methods
  - (a) Positive sequence
  - (b) Negative sequence
  - (c) Zero sequence
5. Determination of power angle characteristics of an Alternator
6. Determination of parameter of a single phase induction motor and study of
  - (a) Capacitor start induction motor
  - (b) Capacitor start and capacitor run induction motor
  - (c) Repulsion start induction motor
  - (d) Universal Motor
  - (e) Shaped pole motor
7. Study of parallel operation of two alternator
8. Measurement of direct and quadrature axis reactances of a salient pole synchronous machine
9. Measurement of sub-transient and transient reactances of a salient pole alternator

#### **CPEE 9305 POWER ELECTRONICS LAB. (0-0-3)** **(Any 10 experiments)**

1. V-I Characteristic of SCR
2. Different methods of triggering of SCR
  - (a) Phase controlled method

- (b) UJT triggering method
- (c) Cosine controlled triggering method
- 3. Study of triac and full wave voltage control method of it.
- 4. 1 phase half wave and full wave full controlled converter with R, R-L and D.C motor load with / without freewheel diode
- 5. 3-phase half and full wave full controlled converter with R, R-L and D.C motor load with/ without freewheeling diodes
- 6. Study of characteristics curves of a 3 phase diode bridge.
- 7. Study of DC chopper with PWM controller
- 8. Study of SCR communication
  - (a) Forced communication
  - (b) Load communication
- 9. Study of single phase series inverter
- 10. Three phases IGBT based four quadrant chopper drive for D.C motor
- 11. Three phases IGBT based four quadrant chopper drive for induction motor
- 12. Study of 1 phase cyclo converter

## 7<sup>th</sup> Semester

### HSSM 4403 ENVIRONMENTAL ENGINEERING (3-0-0)

**Objective :** This course introduces the students to the environmental consequences of Industries, development actions etc. and the methods of minimizing their impact through technology and legal systems.

#### Module – I

**Ecological Concepts and Natural Resources :** Ecological perspective and value of environment. Environmental auditing, Biotic components, Ecosystem Process : Energy, Food Chain, Water cycle, Air cycle etc., Environmental gradients, Tolerance levels of environment factor, EU, US and Indian Environmental Law, Global Perspective.

**Chemistry and Microbiology in Environmental Engineering :** Physical and chemical properties of water, Atmospheric chemistry, Soil chemistry, Microbiology, Chemical and biochemical reactions, Material balances and Reactor configurations.

**Concept in Hydrology :** Hydrological cycle, Water balance, Energy budget, Precipitation, Infiltration, evaporation and evapotranspiration, Rainfall-runoff relationships, Urban hydrology, Ground water, Ground water chemistry, Water contamination and pollution prevention.

#### Module – II

(9 hours)

**Water Pollution :** water quality standards and parameters, Assessment of water quality, Aquatic pollution, Freshwater pollution, Estuarine water quality, Marine pollution, Organic content parameters, DO and BOD demand in streams, Transformation process in water bodies, Oxygen transfer by water bodies, Turbulent mixing, Water quality in lakes and preservers , Ground water quality.

**Air Pollution :** Air pollution and pollutants, criteria pollutants, Acid deposition, Global climate change –green house gases, non-criteria pollutants, emission standard form industrial sources, air pollution meteorology, Atmospheric dispersion.

**Noise Pollution :** Physical Properties of sound, Noise criteria, Noise Standards, Noise measurement, Noise control.

#### Module – III

(15 hours)

**Water Treatment :** Water quality standards, Water sources and their quality, Water treatment processes, Pre-treatment of water, Conventional process, Advanced water treatment process.

**Waste Water Treatment :** Water flow rate and characteristics, Design of waste water network, Waste water treatment process, pretreatment, primary and secondary treatment of waste water, Activated sludge treatment : Anaerobic digestion and its microbiology, Reactor configurations and methane production. Application of anaerobic digestion. Bio-solids regulations, Characteristics and processing of bio-solids, first and second stage processing of sludge. Sludge disposal,. Integrated sewage and sludge management.

#### Solid Waste Management

**Source classification and composition of MSW :** properties and separation, storage and transportation, MSW Management, Waste minimization of MSW, Reuse and recycling, Biological treatment, Thermal treatment, Landfill, Integrated waste management.

Hazardous Waste Management, Hazardous waste and their generation, Medical hazardous waste, Household waste, Transportation and treatment of hazardous waste : Incinerators, Inorganic waste treatment, Treatment systems for hazardous waste, handling of treatment plant residue.

### **Industrial Air Emission Control :**

Characterization of air stream, Equipment selection, Equipment design, Special Methods: Flue gas desulfurization, NO<sub>x</sub> removal, Fugitive emissions.

#### **Module – IV**

**(8 hours)**

**Waste Minimization** : Concept, Life Cycle Assessment, Elements of waste minimization strategy, Benefits of waste minimization, Elements of waste minimization programme, Waste reduction techniques.

Environment impact Assessment, Origin and procedure of EIA, Project Screening for EIA, Scope studies, Preparation and review of EIS.

#### **Reference :**

1. Environmental Engineering Irwin/ McGraw Hill International Edition, 1997, G. Kiely,
2. Principles of Environmental Engineering and Science, M. L. Davis and S. J. Masen, McGraw Hill International Edition, 2004
3. Environmental Science, Curringham & Saigo, TMH,
4. Principles of Environmental Science, Curringham
5. Introduction to Environmental Science, Y. Anjaneyalu, B. S. Publication.

### **CPEE 5401 POWER SYSTEM OPERATION AND CONTROL (3-1-0)**

#### **Module – I**

**(10 hrs)**

Fundamental of power System : concepts of real and reactive powers, Complex power per unit representation of power system. Transmission capacity, series and shunt compensation, Load characteristics, Real power balance and its effect on system frequency, Load frequency mechanism, reactive power balance and its effect on system voltage, on load tap changing transformer and regulating of transformer, Introduction to FACT devices.

#### **Module – II**

**(6 hrs)**

Load Flow Analysis : System model : The static load flow equation (SLFE), Definition of the load flow problem, Network model formulation, A load flow sample study, Computational aspects of the load flow problem, effect of regulation transformers.

#### **Module – III**

**(10 hrs)**

Load frequency Control : Dynamic incremental state variable, PF versus QV control MW frequency of an individual generator, modeling of speed governing system, Turbine, Division of power system into control areas, P-F control of single control area and two area control, Economic dispatch controller.

#### **Module – IV**

**(14 hrs)**

Economics Operation of Power System : Distortion of load between units within a plant, Transmission losses as function of plant generation, Calculation of loss coefficients, Distribution of loads between plants with special reference to steam and hydel plants, Automatic load dispatching, Unit commitment, Power System Stability : Steady state stability, transient stability, Swing equation, Equal area criterion for stability, Methods of improvement of transient stability, Stability analysis of multimachine power systems.

1. Power System Analysis, Hadi Saadat, TMH
2. Power System Analysis and Design, B. R. Gupta, S. Chand
3. An introduction to electric Energy System Theory, O.I. Elgerd, TMH

4. Elements of Power System Analysis, W.D. Stevenson, TMH

### **CPEE 5402 POWER SYSTEM PROTECTION (3-1-0)**

**Module –I (10 hrs)**

Faults on power system and their classification, evolution of a power system, protection system attributes, system transducer, principles of power system protection, over current protection : over current relay, IDMT and DTOC relays, Directional over current relays, Feeder protection.

**Module – II (10 hrs)**

**Different Protection :** Simple differential protection, Zone of protection, percentage differential relay, Earth Leakage protection

**Transformer Protection :** Over current protection, Differential protection of single and three phase transformers, Star-delta and Delta star connections, Harmonic restraint for magnetizing inrush. Interturn and incipient faults in transformers, Busbar protection.

**Module –III (12 hrs)**

**Distance relaying :** Introduction, impedance, Reactance, and MHO relays, Three stepped distance protection, Carrier added protection of transmission lines.

**Generators protection :** Stator and rotor faults, Abnormal operating conditions, Generator, differential protection, earth fault relays.

**Module – IV (10 hrs)**

Static comparators as relays, Amplitude and phase comparators, Synthesis of distance relaying using static comparators, electronic circuits for Static relays.

Microprocessor based numerical protection, Digital filtering, Numerical overcurrent, differential, and distance protection, effect of CT and PT saturation's on Numerical relays.

**Books**

1. Fundamental of Power System Protection, Y.G. Paithankar, S.R. Bhide (PHI)
2. Power System Protection and Switchgear, Badriram, D.N. Viswakarma, TMH
3. Power System Protection, S.P. Patra, S.K. Basu, S. Chowdhury, Oxford Publication

### **PECS 3401 SOFT COMPUTING (3-1-0)**

**Module – I (06 hours)**

Basic tools of soft Computing – Fuzzy logic, Neural Networks and Evolutionary Computing , Approximations of Multivariate functions, Non – linear Error surface and optimization.

**Module – II (10 hours)**

Fuzzy Logic Systems : Basics of fuzzy logic theory, Crisp and fuzzy sets. Basic set operations. Fuzzy relations, Composition of Fuzzy relations, Fuzzy inference, Zadeh's compositional rule of inference. Defuzzification. Fuzzy logic control: Mamdani and Takagi and Sugeno architectures. Applications to pattern recognition and control.

**Module – III (16 hours)**

Neural networks : Single layer networks, Perceptron. Activation functions. Adalinc: its training and capabilities, weights learning, Multilayer perceptrons : error back propagation, generalized delta rule. Radial basis function networks and least square training algorithm, Kohonen self – organizing map and learning vector quantization networks. Recurrent neural networks, Simulated annealing neural networks. Adaptive neuro-fuzzy information systems ( ANFIS), Applications to control and pattern recognition.

**Module – II (08 hours)**

Evolutionary Computing : Genetic algorithms : Basic concepts, encoding , fitness function, reproduction. Differences of GA and traditional optimization methods. Basic genetic programming concepts Applications.

### **Text Books.**

1. V. Keeman, "Learning and Soft computing", Pearson Education, India.
2. J.S.R. Jang. C.T. SUN and E. Mizutani, "Neuro-fuzzy and soft-computing". PHI Pvt. Ltd. , New Delhi.
3. Fredric M. Ham and Ivica Kostanic, "Principle of Neuro Computing for Science and Engineering", Tata McGraw Hill.  
S. Haykins, "Neural networks : a comprehensive foundation". Pearson Education , India.

## **CPEC 5308 COMMUNICATION ENGINEERING (3-0-0)**

### **Module – I**

**(12 hours)**

Elements of Communication System – Analogue System, Digital System, Distinguishing features. Electromagnetic Spectrum. Bandwidth. Comparison between Analogue & Digital Communication Systems.

#### **Baseband Signals**

Analogue Signal, Digital Signal. Converting an analogue signal to Digital Signal: Sampling, Nyquist Criteria. Information and Sampled value. Quantization and Binary Coding of sampled values . Transformation of Base band signal from Time domain to Frequency domain and Vice-versa. F . T. of few simple baseband signals.

Time Division Multiplexing (TDM), Frequency Division Multiplexing (FDM). Inter Symbol Interference and Crosstalk. Digital Baseband Signal Formats – Unipolar, Bipolar, NRZ and RZ. Pulse Code Modulation, Quantization error. Companding –Pre-emphasis and De-emphasis. TDM of 8-bit PCM Signal. Digital Baseband Reception. Conceptual definition of Matched Filter. Binary Matched Filter Detector.

### **Module – II**

**(12 hours)**

#### **Modulation Techniques :**

Need for Modulation, Analogue Modulation Techniques : Amplitude Modulation (AM), Depth of Modulation, Modulated Waveform, Powers in Carrier, and Sidebands. Generation of DSBC and SSB, Balanced Modulator, AM Demodulators. Frequency Modulation (FM) – Frequency Deviation , Frequency Modulated Waveform, Spectrum. Narrow Band FM and Wideband FM. Generation of FM; Narrow Band FM Modulator, Wideband FM Modulator, FM Discriminator.

#### **Digital Modulation Techniques**

Phase Shift Keying (PSK), Frequency Shift Keying (FSK) – their Basic Principle, Waveform , Generation and Detection. Ideal low pass, Bandpass and Band rejection filters – their impulse response (no mathematical derivation).

### **Module – III**

**(11 hours)**

Noises in Communication Systems : Sources of Noise, White noise, Narrow Band Noise. Spectral Density Function of Noise (no derivation explaining its utility in noise performance evaluation of a Communication System).

Performance of Communication Systems in the Presence of noise:

SNR of AM, FM. PSK-PCM- Simple derivation and or Interpretation of Standard SNR expressions in each case.

Noise bandwidth, Available Power, Noise temperature Two port noise Bandwidth, Input Noise Temperature , Noise Figure, Equivalent noise temperature of a cascade. An example of a receiving system.

Antennas and Propagation of Radio Waves :

Dipole Antenna and Parabolic Reflector Antenna- their Principle of Operation, Radiation Pattern and Gain Propagation of Radio wave over ground and through ionosphere . Line of Sight Propagation of Microwave Signal.

#### **Module – IV**

**(10 hours)**

Modern Communication Systems:

Brief description of fiber optic communication System : Block Diagram, Range of operating Wavelength , Optical Fiber, Optical Sources - LEO & LASER, Optical detectors; Concept of GHZ - km Bandwidth . Advantages of fiber optic system,

Brief description of Satellite Communication Systems : Block diagram. Frequency bands of operation, uplink and down link frequencies, Transponder , earth stations, Types of Antenn mounted on satellites. Services available through satellite.

Mobile Communication

Cellular Communication System : Block Schamic description , Cellular frequency bands, digital Technology , Cellular Concept, Capacities, Roaming facilities . Received Signal, Fading concept of diversity reception. Multiple access facilities.

#### **Text Books :**

1. Analog and Digital Communication Systems 5<sup>th</sup> Edition by Martin S. Roden. SPD Publisher Selected portion from Ch. 1,2, 3,4 and 5.
2. Principle of Communication System by H. Tanb and D. L. Shilling .
3. Communication Systems by R.P. Singh and S. D. Sapre. TMH.

#### **Additional Reading :**

Communication Electronics - Principles and Applications, 3<sup>rd</sup> Edition by Louis E. Freuzel. (For topics 6,7, and 8)

### **PEEE 5401 ADVANCED ELECTRIC MACHINES (3-0-0)**

#### **Module-1**

**12 Hours**

Synchronous Machines: Mathematical descriptions of 3-phase synchronous machines, flux linkage and armature voltage equations, inductance's of salient-pole synchronous machines, Park's transformation, power and torque calculations from d-and q- axes representation, Phasor diagram, Balanced and unbalanced short-circuits of the synchronous generators, steady, transient, and subtransient reactances, and time constants , short-circuit currents, Negative sequence reactance, measurement of transient parameters from short-circuit tests. Synchronous Machines dynamics and Phasor representation.

#### **Module-2**

**10 Hours**

Induction Machines: Mathematical description of three-phase induction machines in arbitrary, and synchronously rotating reference frames, power and torque calculation in terms of d-and q-variables, Induction-machine electrical transients, decay of short-circuit currents, transient equivalent circuit, Induction machine dynamics.

#### **Module-3**

**10 Hours**

Switched Reluctance motors: flux linkage and inductance formulations, and their dynamic equations, torque calculations, torque ripple minimization , Permanent magnet and Hysteresis motors and their mathematical descriptions and dynamic performance, Inductor alternators, linear synchronous and induction motors.

**Module-4****10 Hours**

Direct-current machine dynamics, dynamic analysis of separately excited and shunt generators and motors, effects of saturation, dynamic analysis with time-domain techniques, Metadynes and amplidyne as generalized machines, theory and performance of stepper motors and brushless dc motors.

**Books :**

1. Electrical Machines by Mulukutla S. Sharma ( West Publishing company)
2. Electrical Machines and Power Systems by S.A. Nasar

**PEEE 5402 POWER STATION ENGINEERING (3-0-0)****Module – I****(10 hours)**

Introduction to different sources of energy and general discussion on their application to generation. Hydel power.

**Hydrology:-** Catchment area of a reservoir and estimation of amount of water collected due to annual rainfall, flow curve and flow duration curve of a river and estimation of amount stored in a reservoir formed by a dam across the river, elementary idea about Earthen and Concrete dam ,

**Turbines:-** Operational principle of Kaplan. & Francis turbine and Pelton wheel, specific speed, workdone and efficiency.

**Hydroplant:-** head gate, penstock , surge tank, scroll case, draft tube and tailrace, classification of plants, turbines for different heads, plant capacity as a base load and peakload station, plant auxiliaries.

**Module – II****(10 hours)**

Thermal Power.

Overall plant components in Block dams indicating the air, circuit, coal and ash circuit, water and steam circuit, cooling water circuit; various types of steam turbines, ash and coal handling system, elementary idea about a water tube boiler , super heater, reheaters, economiser air preheater, dust collection, draft fans and chimney; condensers, feed water heaters, evaporator and makeup water, bleeding of steam; cooling water system; Governors, plant layout and station auxiliaries.

**Module – III****(09 hours)**

Nuclear power

Introduction to fission & fusion, reactor construction, controlled chain reaction, operational control of reactors, Brief study of various types of reactors (Boiling water, pressurised water, sodium graphite, breeder) layout of nuclear power plant

Electrical System.

Different types of alternators, methods of cooling

Excitation system:- Shaft mounted D. C. generator, elements of static and brush less excitation, field flashing,

AV.R. : - magnetic amplifier and thyristor converter types.

Main transformer, unit transformer and station reserve transformer. Commissioning tests of alternators and transformers.

**Module – IV****(07 hours)**

Choice of size and number of generating units:- Review of the terms maximum demand, load factor, diversity factor, plant capacity and use factor, load & load duration curve and their effect on the generating capacity. Reserve units (hot, cold and spinning\_reserve) Effect of powerfactor on the generating capacity and economy. Different types of power tariffs. Brief idea about national grid and its operational problems.

**Ref. Books :**

1. Elements of electrical power system design by M.V Despande (A. H. Wheler) 2. Power station engg. & economy by SKrotizki & Vopat (Tata M. H)

**CPEC 5403 VLSI DESIGN (3-0-0)****Module – I****(10 hours)**

Introduction, Historical perspective, VLSI Design methodologies, VLSI Design Flow, Design Hierarchy, Design Styles, CAD Technology . Fabrication of MOSFETS, Fabrication processes, NMOS Fabrication, CMOS n-well process, Layout Design rules, Stick Diagrams, Full Custom Mask Layout Design, MOS Transistor, Review of structure and operation of MOSFET (n-MOS enhancement type), CMOS, MOSFET v-I characteristics , MOSFET scaling and small geometry effects, MOSFET capacitances, Modeling of MOS Transistors- Basic concept the SPICE level-1 models, the level –2 and level –3 model equations.

**Module – II****(10 hours)**

MOS Inverters : Basic NMOS inverters, characteristics , inverters with resistive load and with n-type MOSFET load, CMOS inverter and characteristics .

MOS inverters : Switching characteristics and interconnect effects: Delay time definitions and calculation, inverter design with delay constraints , estimation of parasitics switching power dissipation of CMOS inverters.

**Module –III****(10 hours)**

Combinational MOS logic circuits, CMOS logic circuits , state style, complex logic circuits, pass transistor logic, sequential logic circuit – introduction, SR latch, clocked latch & flip-flop circuits , CMOS D latch and edge triggered flip-flop .

Dynamics logic circuits : Dynamic logic, basic principles, high performance dynamics CMOS circuits, Dynamic Ram, SRAM, flash memory.

**Module – IV****(12 hours)**

Systems Design method, design strategies, concept of FPGA, standard cell based design, design capture tools, hardware definition languages such as VHDL and packages. Xilinx (introduction), introduction to IRSIM and GOSPL (open source packages) , design verification and testing , simulation at various levels including timing verification, faults models. Design strategies for testing chip level and system level test techniques.

**Text Books :**

1. CMOS Digital integrated Circuits – Analysis & Design – Sung Mo-Kang & Yussuf Leblebici, TMH.
2. VHDL Programming by example –Perry TMH.

**Reference Books :**

1. Digital Integrated Circuits : A Design Perspective – Rabey et.al. Pearson Education.

2. VLSI design Techniques for analog and digital circuits – Geiger et. Al. McGraw Hill.

## **BCSE 3310 COMPUTER SYSTEM ARCHITECTURE (3-0-0)**

### **Module – I**

**(06 hours)**

Introduction: Brief history of computers, organization and architecture, basic organization of computers, system bus & interconnection, PCI, computer functions, I-cycle. Interrupt and class of interrupts, Von-Neumann Machine: structure of IAS, computer components, fetch and execute cycles, example of program execution, instruction cycle state diagram, instruction pipelining.

### **Module – II**

**(14 hours)**

CPU Organization: Fundamental concepts, fetching and storing a word in memory, register transfer, performing an arithmetic and logic operation, execution of a complete instruction, general register organization: control word, examples of micro-operations, stack organization, RPN, evaluation of arithmetic expression using RPN, instruction format: three address, two address, one address and zero address instructions, addressing modes: types of addressing modes, numerical examples, data transfer and manipulation: data transfer, data manipulation, arithmetic, logical & bit manipulation instruction, program control: conditional branch instruction, subroutine, program interrupt, types of interrupt, RISC & CISC characteristics, control unit operation: hardware and micro-programmed control.

### **Module – III**

**(08 hours)**

Input/ Output Organization :Peripheral devices, input-output interface, I/O bus and interface module, asynchronous data transfer, priority interrupt: daisy chaining priority, parallel priority interrupt.

### **Module – IV**

**(12 hours)**

Memory Organization: Memory hierarchy, characteristic of memory system, semiconductor main memory types, organization, memory cell operation, cache memory: cache principle, elements of cache design, cache size, mapping function, replacement algorithm, LRU, FIFO, LFU, write policy, number of caches: single versus two level caches, Pentium cache organization, associative memory: hardware organization, match logic, read operation, write operation auxiliary memory: magnetic disks, magnetic tapes, virtual memory: paging, address mapping using pages, segmentation, demand paging, memory management hardware.

### **Books :**

1. William Stallings, "Computer Organization and Architecture", Fourth Edition, PHI.
2. M. Morris Mano, "Computer system Architecture", Third Edition, PHI.
3. John P. Hayes, "Computer Architecture and Organization", Third Edition, MC Graw Hill International Edition.

## **CPEN 5303 ELECTRONICS INSTRUMENTATION AND MEASUREMENTS (3-0-0)**

### **Module – I**

**(10 hours)**

Analogue Electronics Volt-ohm-Milliampmeters. Transistor Voltmeter Circuits. FET-Input Voltmeter. OPAMP Voltmeter Circuits. Ohmmeter function in Electronic Instruments, AC Electronic Voltmeters. Analogue Electronic Multimeters. Multimeter Prober

Digital Voltmeters and Frequency meters.

Ramp and Dual-slope-Integrator Digital Voltmeters, Digital Multimeters, Digital Frequency meter. Time and Ratio Measurement.

**Module – II****(10 hours)**

## Cathode Ray Oscilloscopes

Cathode Ray Tube, Deflection Amplifiers, Time Base, Dual Trace Oscilloscope, Oscilloscope Controls, Oscilloscope Probes, Measurement of Amplitude, Phase and frequency. Pulse Measurements. Display of Device Characteristics, X-Y and Z Displays. Oscilloscope Specification & Performance. Special Oscilloscopes: Delayed Time Base Oscilloscope ; Sampling Oscilloscope ; Digital Storage Oscilloscope , DSO Application.

**Module – III****(10 hours)**

## Signal Generators

Low Frequency Signal Generators, Function Generators, Pulse Generators , RF Signal Generators, Sweep frequency Generators, Frequency Synthesizer

## Calibration of Instruments

Comparison Methods, Digital Multimeters as standard Instruments. Calibration Instruments. Potentiometer calibration Methods.

**Module – IV****(3 hours)**

Spectrum Analyzer: Block diagram , Operation, performance and application- Digital spectrum Analyzer.

**PRACTICALS****CPEC 9403 VLSI LAB. (0-0-3)**

1. Characteristics of NMOS .
2. Characteristics of CMOS
3. Stick diagram , introduction to  $\lambda$  rules .
4. Implementation of inverter, NAND and NOR gate
5. Design of Half Adder
6. Design of Full Adder
7. Design of a multiplexer
8. Design of decoder circuits
9. Design of Latch, S-R flip-flop, D flip –flop
10. Design of Memory circuits.

**N. B.**

- a) Lab. '1' through '4' can be done using Tanner Spice/magic tools
- b) Lab '5' through '10' should be done using Xilinx or ISE or any other open source tools. (GPSPL).

**CPEE 9402 POWER SYSTEM LAB. (0-0-3)**

1. Determination of operating characteristics of biased different relay with different % of biasing
2. Determination of A,B, C, D parameters of an artificial transmission line
3. Determination of the operating characteristics of an induction type over current relay different % of plug setting and time multipliers
4. Determination of transient and sub-transient reactance of a three phase alternators
5. Parallel operation of two alternators and effect of its load sharing

## 8<sup>th</sup> Semester

### HSSM 4404 MARKETING MANAGEMENT (3-0-0)

Objective of the Course :The course aims at introducing the basic concepts of marketing to the undergraduate students

#### Module – I

(9 hours)

**Marketing Management** : Concept, Process, Functions and relevance in the current context.

**Marketing Environment** : Socio-economic forces. Competition : national and global, Technology, Government Policy, Suppliers, Buyers, Consumer Resistance considerations. Environment scanning tools and techniques

**Competition Analysis** : Factors contributing to competition, Competition analysis tools, Competitive arena mapping, Segmentation matrix.

**Market Planning** : Exploring Opportunity, Product –market selection, Approaches to Market Planning, Market Planning Process.

#### Module II

(10 hours)

**Market Research and Information Systems** : Research Process, The Internet and World Wide Web based Information collection and processing, Database, Data Warehouses and Data Mining, Global Market Research, Competitive Intelligence.

**Consumer Behaviour** : Importance of buyer and his/ her role in purchasing. Influence of buyer behaviour, Buyer behaviour study tools. Organizational buying behaviour.

Market Segmentation, Targeting and Positioning : Definition, Bases and Methods of segmenting consumer and Industrial markets. Target Market strategies: Domestic and global perspective. Market Positioning.

**Market Demand Forecasting** : Key Terms, Forecasting Tools : Short term tools : Moving average and Exponential smoothing methods, Long-term forecasting Tools : Time series analysis, Econometrics methods, Qualitative tools : Buying Intention Survey, Sales Force Opinion and Delphi Techniques.

#### Module – III

(11 hours)

**Product Planning** : Product Life Cycle, Locating products in PLC, New Product Development Process, Branding Strategy, Positioning a Brand, Brand Equity, Packaging and Labeling, Product-mix and Product Line, Product-Mix strategies, Planned Obsolescence.

**Pricing Decision** : Objectives and Factors influencing pricing, Cost-Plus Pricing, Breakeven Analysis, Price Based on Marginal Analysis, Price Elasticity of Demand, Operating statement, Markups Analysis Ratios, Pricing Strategies : Market-Entry, Discounts and allowances, Geographic Pricing, Special Pricing.

**Promotion Decisions** : Marketing Communication and Promotion Process, Promotion Mix, Advertising : Media and Media selection process. Organising for advertising, sales promotion.

#### Module -IV

(10 hours)

**Channels of Distributions** : Designing Distribution Channels, Wholesaling and Physical Distribution, Retailing. Supply Chain Management (Basic only). Personal selling, Direct Marketing, Managing Sales Force.

**Trends in Marketing** : Global Marketing, Customer Services, Customer Relationship Management, Rural Marketing and Service Marketing.

**References :**

### **CPEE 5403 ELECTRICAL DRIVES (3-1-0)**

**Module – I** **(10 hrs)**

Requirements, AC and DC drives, modern trends in drives technology, Characteristics of DC, Induction and Synchronous motor drives, Braking and starting, Classification , Dynamic and stability consideration of electric drives.

**Module –II** **(14 hrs)**

Converter for feeding electric motors, Phase controlled and line commuted converters, DC Choppers, inverters, Cycloconverter and AC voltage controller for Drive systems, Controller for drive systems, Control of DC, Induction, and Synchronous motor drives.

**Module – III** **(10 hrs)**

Control Techniques for electric drives, Block diagram representation, transfer functions transient response, frequency response and stability, compensating techniques.

**Module –IV** **(8 hrs)**

Rating and heating of electric drives, power loss, Heating and Cooling of motors, Classes and duty and selection of motors, Drives for specific application like steel, paper, machine tools, cement and sugar mills, Microprocessor for control of electric drives, microprocessor hardware and software for drive system.

**Text Books :**

1. Electric drives, V. Subrahmanyam, TMH
2. Power Electronics and Drives, M.H. Rashid, PHI
3. Modern Power Electronics and AC Drives, B.K. Bose, (Pearson)

### **CPEC 5404 MOBILE COMMUNICATION (3-0-0)**

**Module – I** **(12 hours)**

A brief introduction to Mobile Telephony, Technologies and Choices.

Cellular Concept – System Design: Fundamentals: Frequency reuse, Channel Assignment, Handoff Strategies, Interferences and System Capacity, Trunking and Grade of Service; Improving coverage and capacity in Cellular Systems – Cell Splitting, Sectoring, Repeaters and Range Extension, Microcell & Picocell Zone Concept. Antennas for Base Station and hand held Cellular phone.

**Module – II** **(14 hours)**

**Mobile Radio Propagation :** Large –Scale path loss, Ground Reflection Model , Diffraction, Scattering. Outdoor propagation Model – Okumura Model; Indoor Propagation Model: Partition losses, Log distance Path loss Model.

Small Scale Fading and Multipath, Doppler Shift . Types of Small Scale Fading and their effect on received signal.

**Modulation Techniques:**

FM for Analogue . FM Detection Techniques – PLL and Quadrature Detection. Digital Modulation:  $\pi / 4$  QPSK and MSK, GMSK.

### Module – III

(14 hours)

Spread Spectrum Techniques – DS-SS and FH- SS.

Performances of FM,  $\pi/4$  QPSK & MSK in Fading and Interference .

Fundamentals of Equalization – adaptive Equalizer. Diversity Techniques – Space, frequency Polarization and Time Diversity.

#### Multiple Access Techniques :

Frequency Division Multiple Access (FDMA) , Time Division Multiple Access (TDMA), Spread Spectrum Multiple Access – Frequency Hopped Multiple Access (FHMA), Code Division Multiple Access (CDMA). Frequency and Channel specification for CDMA Digital Cellular Standard (IS-95) .

### Module – II

(7 hours)

#### Wireless Networking :

Various Generations of Wireless Networks, Fixed Network Transmission Hierarchy, Traffic Routing in Wireless Networks – Circuit Switching, Packet Switching. The X . 25 Protocol.

Global System for Mobile (GSM): features, architecture, channel types, Frame Structure in GSM. Signal processing in GSM.

#### Text Books :

1. Wireless Communication, 2<sup>nd</sup> Edition by Theodore S. Rappaport , Pearson Publication.

#### Additional Books :

1. Mobile Communication Engg., 2<sup>nd</sup> Edition by William C. Y. Lee Mc Graw Hill International Edition.
2. Mobile Cellular Communications, 2<sup>nd</sup> Edition by William C. Y. Lee Mc Graw Hill International Edition.
3. Mobile Communication, 2<sup>nd</sup> Edition by Jocken Schiller, Pearson Education.
4. Wideband Wireless Digital Communication by Andreas F. Molisch Editor Pearson Education.

### PECS 3413 INTERNET AND WEB TECHNOLOGY (3-0-0)

The Internet and WWW

Understanding the WWW and the Internet, Web Architecture, Major issues in web solution development, Web servers (details of Apache Web Server), Web Browsers ( Microsoft Internet Explorer and Netscape Navigated)

HTML

Planning of Web page, Model and structure for a Website, designing Web pages, Basic HTML using images links, HTTP methods and forms, Tables, Multimedia content (Audio and Video) Frames

CGI Basics

Introduction to CGI, CGI building blocks, CGI Scripting in C, CGI Security

JAVA Script

Programmng Fundamentals, built in object, Form object and elemnt, Advavnce Java Script objects, Working with data, Flow Control Structures, Operator, Custom function and Object, Data entry and Validation, Tables and Forms, Security Issues

VB Scripts

VB Script functionality, Active X controls, Active Server Pages, Error Handling, VB Script Controls, Web Based application

## Textbooks

There are large numbers of good books available in each topic. Instructors are advised to use their library resources.

## Reference Books

1. Internet Read-Map, Bennett Falk, BPB Publication
2. HTML complete reference, Powell, TMH
3. Rese Colderun, Teach yourself CGI Programming in 7 days, Tech Media 1998
4. Danni Goodman, Java Script Bible, 2<sup>nd</sup> Ed. Comdex Computer Pub.1997
5. Professional ASP 3.0, Alles Homer & David Susmen, SPD Publication

## PEEC 5411 ADVANCED COMMUNICATION SYSTEMS (3-0-0)

### Module – I

(12 hours)

Review of Fundamental Concepts of Data Communication.

Data-Link Protocol and Data Communications Networks.

Data-link Protocol Function, Character and bit Oriented Data Link Protocols. Asynchronous Data Link Protocols, Synchronous Data-Link Protocols, Synchronous Data –Link Control, High-Level Data Link Control, Public Switched Data Networks, CCITT X. 25, User-to-Network Interface Protocol. Integrated Services Digital Network (ISDN) . Asynchronous Transfer Mode (ATM). Local Area Networks. Ethernet.

### Module II

(12 hours)

Digital T-Carriers and Multiplexing .

Time-Division Multiplexing (TDM); T1 Digital Carrier. North American

Digital Hierarchy. Digital Carrier Line Encoding. T Carrier Systems, Digital Carrier Frame

Synchronization. Bit Vrs Word Interleaving. Statistical TDM. Codecs and Combo Chips. FDM. AT & T's FDM Hierarchy. Composite Base band Signal . Formation of Master group. Wavelength Division Multiplexing (WDM).

### Module – III

(10 hours)

Digital Cellular Telephone – Time Division Multiple Access (TDMA), Control Channel, Voice Channel, Speech Coding, Digital Modulation Scheme. Interim Standard 95 (IS-95) –CDMA. Global System for Mobile Communication (GSM). Personal Satellite Communications System (PCSS). Iridium Satellite System .

### Module – IV

(10 hours)

Microwave Radio Communications :

Microwave Radio Frequency assignments. Advantages and Disadvantages of Microwave Radio. FM Microwave Radio System. Diversity. Protection Switching arrangements. Repeater Station. LOS Characteristics Microwave Radio System Gain.

Satellite Multiple Accessing Arrangements. FDM/FM Satellite Systems. FDMA, TDMA, CDMA. Global Positioning Systems (GPS).

**Text Books :**

1. Advanced Electronic Communication Systems Sixth Edition by Wayne Tomasi , Pearson Education. Selected Education from 4,5,7,12 and 15.

**Additional Reading :**

1. Wideband Wireless Digital Communication by Andreas F. Molisch-Editor, Pearson Education.

**PEEC 5402 ADAPTIVE SIGNAL PROCESSING (3-0-0)****ADAPTIVE SYSTEMS & APPLICATION :**

Application of Adaptive filters to system identification, Adaptive channel equalization, Echo cancellation in Data Transmission, Adaptive Noise Cancellation. Adaptive Line Enhancement (ALE), LPC of speech signal, Adaptive Arrays.

**ADAPTIVE ALGORITHMS :**

The Widrow-Hoff Least Mean Square Algorithm, The RLS Algorithm, The fast RLS Algorithms, Transform domain LMS Algorithm, Power Normalization, Gradient Lattice- Ladder Algorithm.

**ADAPTIVE FILTER STRUCTURES :**

Tapped Delay Adaptive filter, Transform Domain Adaptive Filter, Block LMS Filters Algorithms and Structures, Adaptive Equalizer and DE-convolution, Adaptive Line Enhancement, Adaptive System Identification.

**HIGHER ORDER SPECTRA**

Properties, Application to Blind De-convolution, Channel Equalization and Image Processing.

**Text Book :**

Introduction to Digital Signal Processing - J. G. Proakis & D. G. Manolakis, Macmillan, Publishing Co., 1989. Chapters – 2,4,5,6,7, 8,9 & 11.

Adaptive Signal Processing by B. Widrow & S. D Stearns , Prentice hall, Inc. Englewood Cliffs; NJ, 1985 , Chapter 1,2,6,8,9,& 10.

**Measurements**

Measurement of frequency and Time standard broadcast by Radio Stations. Squarewave Testing of an amplifier. Measurement on tuned Circuits . Measurement on Noise figure of a Communication Receiver.

**(4 hours)****Text Books :**

1. Electronic Instrumentation and Measurements, 2<sup>nd</sup> Edition, by David A. Bell, Prentice Hall of India. Chapter 4,6,9,10,11,12,and 14.

2. Elements of Electronic Instrumentation and Measurement, 3<sup>rd</sup> Edition, by Joseph J. Carr, Pearson Education, Selected portion from 7,8,9,14,18,20 and 22.

**Additional Reading :**

1. Electronic Test Instruments – Analog and Digital Measurements, 2<sup>nd</sup> Edition By Robert A. Witte, Pearson Education.

2. Modern Electronic Instrumentation and Measurement Techniques by Albert D. Helfrick and Willim D. Cooper, Pearson Education, First Indian Reprint, 2005.

**BCSE 3306 COMPUTER NETWORKS (3-0-0)****Module – I**

Overview of Data Communications and Networking .

Physical Layer : Analog and Digital, Analog Signals, Digital Signals, Analog versus Digital, Data Rate Limits, Transmission Impairment, More about signals.

Digital Transmission : Line coding, Block coding, Sampling, Transmission mode.

Analog Transmission: Modulation of Digital Data; Telephone modems, modulation of Analog signals.

Multiplexing : FDM 150, WDM 155, TDM 157,

Transmission Media : Guided Media, Unguided media (wireless)

Circuit switching and Telephone Network : Circuit switching, Telephone network.

**10 Hours****Module –II**

Data Link Layer

**12 hours**

Error Detection and correction : Type of Errors, Detection, Error Correction  
 Data Link Control and Protocols:  
 Flow and error Control, Stop-and-wait ARQ. Go- Back. N ARQ, Selective Repeat ARQ, HDLC.  
 Point-to – Point Access : PPP  
 Point –to- Point Protocol, PPP Stack,  
 Multiple Access :  
 Random Access, Controlled Access, Channelization.  
 Local area Network : Ethernet.  
 Traditional Ethernet, Fast Ethernet, Gigabit Ethernet.  
 Wireless LANs: IEEE 802.11, Bluetooth virtual circuits: Frame Relay and ATM.

**Module – III** **10 hours**

Network Layer : Host to Host Delivery: Internetworking, addressing and Routing  
 Network Layer Protocols: ARP, IPVA, ICMP, IPV6 ad ICMPR6  
 Transport Layer : Process to Process Delivery : UDP; TCP congestion control and Quality of service.

**Module –IV** **8 hours**

Application Layer :  
 Client Server Model, Socket Interface Domain Name System (DNS):  
 Electronic Mail (SMTP) and file transfer (FTP) HTTP and WWW.

**Security :**  
 Cryptography, Message security, User Authentication.

**Text Book :**  
 Data Communications and Networking : Third Edition. Behrouz A. Forouzan  
 Tata Mc Graw-Hill Publishing company Limited.

**Reference Book :**  
 1. Computer Networks : Third Edition, A system Approach, Larry L/ Peterson and Bruce S. Davie ELSEVIER  
 2. Computer Networks, A. S. Tannenbaum PHI.

**PECS 3408 IMAGE PROCESSING (3-0-0)**

**Module- I** **(8 hours)**

Digital Image Representation, Digital Image Processing System, Visual Perception, Sampling and Quantization, relationship between Pixels, Fourier Transforms, Walsh, Hadamard and Discrete Cosine Transforms.

**Module – II** **(8 hours)**

Spatial and Frequency domain methods, Enhancement by point Processing, Spatial Filtering, Enhancement in the Frequency Domain, Generation of Spatial Masks from Frequency Domain Specifications, Colour Image Processing.

**Module- III** **(8 hours)**

**Image Restoration**  
 Degradation Model, Diagonalization of Circulant and Block Circulant of Matrices. Algebraic Approach to Restoration, Inverse Filtering, Least Mean Square Filter, Constrained Least squares restoration, Iterative Restoration, Restoration in the Spatial Domain.

**Module – IV** **(16 hours)**

Image Compression  
 Fundamentals, Image Compression Models, Elements of Information Theory, Error-Free Compression, Image Compression Standards.  
 Image Segmentation  
 Detection of Discontinuity, Edge linking and Boundary Detection, Thresholding, Region-Oriented Segmentation , The use of Motion in Segmentation.

**Text Books**  
 1. Digital Image Processing, R.C. Gonzalez & R.E Wood, Addison Wesley

**Reference Book :**

1. Digital Image Processing and Analysis, B. Channda & D. Dutta, Prentice Hall
2. Fundamentals of Digital Image Processing, Anil Ku Jain, PHI
3. Fundamental of Electronic Image Processing, Arther R. Weeks Jr. PHI

**BCSE 3401 COMPUTER GRAPHICS AND MULTIMEDIA (3-0-0)**

**Module –I**

**(10 Hours)**

**A survey of Computer Graphics Applications e.g.:** CAD, Presentation Graphics, Art, Entertainment, Education and Training, Visualization, GUI.

**Overview of Graphics Systems :** Video display Devices, Raster-Scan and Random Scan Systems, Input Devices, Hard copy Devices, Graphics Software.

**Output Primitives :-** Points and Lines, Bresenham's line Algorithm, Midpoint Circle algorithm, Filled Area Primitives

**Attributes of output primitives :** Line, Curve, Area fill and character generation, Bundled attributes, antialiasing. Two Dimensional Geometric Transformation.

**Module –II**

**(10Hours)**

**Two Dimensional Viewing :** the viewing Pipeline Viewing coordinate Reference frame, Window-to-viewport coordinate Transformation. Line Clipping (Cohen-Sutherland Algorithm) and polygon Clipping (Sutherland-Hodgeman algorithm) **Three dimensional Object Representation :** Polygon Surface, quadratic Surface, Spline Representation, Bezier Curves and Surfaces B-Spline Curves and surfaces.

**Module –III**

**(10 Hours)**

**Three Dimensional Geometric and Modeling Transformations :** Translation, Rotation, Scaling, Reflections, shear, composite Transformation, Modeling and Coordinate Transformation

**Three Dimensional Viewing :** Viewing Pipeline, Viewing coordinates, Projections (Parallel and Prospective ) Clipping

**Visible Surface Detection Method :** Backface Detection, Depth Buffer, A Buffer, Scan line and Depth sorting

**Illumination Models :** Basic Models, Displaying Light Intensities, Halftone Pattern and Dithering Techniques.

**Surface Rendering Methods :** Polygon Rendering Methods, Gouraud and Phong Shading

**Module –IV**

**(10 Hours)**

**Multimedia Systems :** Medium, Main Properties of a Multimedia System, Sound & Audio, Image and Graphics, video and animation, Data compression : JPEG and MPEG, DVI Multimedia Applications, Future Directions.

**Text Books**

1. Computer Graphics : D.Hearn and M.P. Baker ( C version ) PHI
2. Multimedia Computing Communications And Applications : Ralf Steinmetz And Klara Nahrstedt – Pearson Education .

**Reference :**

1. Computer Graphics Principles & Practice , J.D Foley, A. Dam, S.K. Feiner – Addison Wesley
2. Multimedia Communication Systems – K.R.Rao, Zoran S Bojkovic, Dragorad A. Milovanovic - PHI

## **PEEC 5412 TELEMATICS (3-0-0)**

### **TELEPHONE SYSTEMS**

Elements of Telephone System. Manual telephone exchange. Automatic telephone exchange. Traffic and service grade, Crossbar exchange, Electronics exchange, transmission of computer data over telephone lines. Digital transmission of speech over telephone lines. Concept of quantization, coding and multiplexing, electronics space division switching, time division switching

### **RADIO COMMUNICATION SYSTEMS**

Transmitters, Receivers Various types of AM and FM transmitters, Radio telegraph transmitters, Various types of AM and FM communication receivers, electronically tuned receivers.

### **SATELLITE COMMUNICATION SYSTEMS**

Orbits, Kepler's laws of planetary motion, Station Keeping, Satellite altitude, Transmission path and path loss, Noise consideration, Satellite system, Saturation Flux density, Effective Isotropic Radiated Power, Multiple access methods, uplink and down link power budget calculations.

### **INTRODUCTION TO COMPUTER COMMUNICATION SYSTEMS**

Introduction, Types of networks, Design Features, Examples, Packet radio and satellites, Network protocols, introduction to open system interconnection (OSI) model, different layers and functions of each layer.

### **INTEGRATED SERVICES DIGITAL NETWORKS (ISDN)**

Motivation of ISDN, new services, network protocol architecture, transmission channels, user-network interface, signaling, numbering and addressing, service characterization, inter-working, ISDN standards, broadband ISDN, voice and data integration.

### **CELLULAR AND MOBILE COMMUNICATION**

Introduction to mobile radio communications, concept of cell propagation effects, process of fading, multi-path fading, delay spread and Doppler spread, Rayleigh fading channel, diversity techniques, introduction to GSM standard.

### **TEXT BOOKS**

1. Electronics Communication by – D. Roody and J. Coolen, PHI, India
2. Principles of Communication systems by – H. Taub and D. L. Schilling ; McGraw – Hill, Kogakusha.
3. Telecommunication Switching Systems and Networks, T. Vishwanathan, PHI
4. Communication Systems, S. Haykin, John Wiley & Sons.

### **PRACTICALS**

#### **CPEE 9406 ENTREPRENEURSHIP PROJECT (0-0-3)**

1. The project will be for 2 credits and 3 periods per week is to be devoted for the project.
2. The teacher has to give elementary idea about entrepreneurship through classroom teaching before a project report is prepared by the student.
3. The teacher will first cover the following topics through lecturer and exercises on motivation and games.
  - Entrepreneurship concept, EDP in India, Indian middle class value.
  - Entrepreneurial qualities, motivation perception, risk taking etc.
  - Market survey, Business opportunity guidance
  - Role of DIC, SFC, Bank etc.
  - Working capital assessment, Balance Sheet, Costing, Book keeping.
  - Decision making, Leadership, Communication skill
  - Preliminary Project Report, preparation for a specific product and submission of the report.
4. Evaluation
  - (a) The teacher has to conduct tests/ motivational exercises to assess entrepreneurial capability of the student (20%)
  - (b) The teacher has to test the knowledge of the student on the above topic through a written test. (20%)
  - (c) The teacher has to evaluate the report submitted by the student (i.e. Project report within 50 pages) (60%).

**Reference Books**

1. Entrepreneurship of Small Industries, M. V. Deshpande, Deep and Deep Publication
2. Management of Small Scale Industry, Vasant Desai, Himalaya Pub. House
